Education Olof Steinthorsdottir,Helen J. Forgasz,Joanne Rossi Becker,Kyeonghwa Lee,2010-06-01 Why a book on gender

issues in mathematics in the 21st century Several factors have influenced the undertaking of this project by the editors First

an international volume focusing on gender and mathematics has not appeared since publication of papers emerging from

the 1996 International Congress on Mathematical Education Keitel 1998 Surely it was time for an updated look at this critical

area of mathematics education Second we have had lively discussion and working groups on gender issues at conferences of

the International Group for the Psychology of Mathematics Education PME for the past four years sessions at which

stimulating and ground breaking research has been discussed by participants from many different countries Some

publication seemed essential to share this new knowledge emerging from a wider variety of countries and from different

cultural perspectives Third some western countries such as Australia and the USA have experienced in recent years a focus

on the boy problem with an underlying assumption that issues of females and mathematics have been solved and are no

longer worthy of interest Thus it seemed timely to look more closely at the issue of gender and mathematics internationally

When the idea for this volume first emerged invitations were issued to those regularly attending the working and discussion

groups at PME Potential authors were charged to focus on gender issues in mathematics and were given wide scope to hone

in on the issues that were central to their own research efforts or were in receipt or in need of close attention in their own

national or regional contexts Mathematical Subjects Fiona Walls,2009-08-10 Teaching and learning mathematics is a

political act in which children teachers parents and policy makers are made visible as subjects As they learn about

mathematics children are also learning about themselves who they are who they might become We can choose to listen or

not to what children have to say about learning mathematics Such choices constitute us in relations of power Mathematical

know how is widely regarded as essential not only to the life chances of individuals but also to the health of communities and the economic well being of nations With the globalisation of education in an increasingly market oriented world mathematics has received intensified attention in the first decade of the twenty first century with a shifting emphasis on utilitarian aspects of mathematics This is reflected in the reconceptualisation of mathematical competence as mathematical literacy loosely conceived as those ways of thinking reasoning and working mathematically that allow us to engage effectively in everyday situations in many occupations and the cut and thrust of world economies as active empowered and participatory citizens It is no surprise then that mathematics has become one of the most politically charged subjects in primary school curricula worldwide We are experiencing an unprecedented proliferation of regional and national strategies to establish benchmarks raise standards enhance achievement close gaps and leave no child behind in mathematics education Industries have sprung up around the design administration and monitoring of standardised assessment to measure and compare children's mathematical achievement against identified benchmarks and each other

Middleton,Jinfa Cai,Stephen Hwang,2015-05-05 In recent years funding agencies like the Institute of Educational Sciences and the National Science Foundation have increasingly emphasized large scale studies with experimental and quasi experimental designs looking for objective truths Educational researchers have recently begun to use large scale studies to understand what really works from developing interventions to validation studies of the intervention and then to efficacy studies and the final scale up for large implementation of an intervention Moreover modeling student learning developmentally taking into account cohort factors issues of socioeconomic local political context and the presence or absence of interventions requires the use of large data sets wherein these variables can be sampled adequately and inferences made Inroads in quantitative methods have been made in the psychometric and sociometric literatures but these methods are not yet common knowledge in the mathematics education community In fact currently there is no volume devoted to discussion of issues related to large scale studies and to report findings from them This volume is unique as it directly discusses methodological issue in large scale studies and reports empirical data from large scale studies
