The Generalizability of Critical Thinking: Multiple Perspectives on an Educational Ideal edited by Stephen P. Norris

WALTER G. OKSHOVSKY Memorial University of Newfoundland

Norris, Stephen P. (ed.), (1992). *The Generalizability of Critical Thinking: Multiple Perspectives on an Educational Ideal*. New York: Teachers College Press. Pp. xiv and 1-204. ISBN 0-8077-3172-2. Paper.

This collection of fourteen papers grew out of a conference on the generalizability of critical thinking (GCT) held at Memorial University of Newfoundland in 1989. Stephen Norris has here brought together some of the best-known and most influential writers in the area of GCT to produce the first book devoted exclusively to an examination of the generalizability question. It is an important and welcome book. Only four of the papers are published elsewhere, all with modifications. All of the papers are of a high standard in my estimation and there is none of the repetitiveness one tends to find in volumes of collected papers. With contributions from philosophers and psychologists, the papers together offer a good representative display of the range of philosophical, psychological, and educational issues which have revolved over the years around the notion of generalizability. A number of papers broaden the vista further through their treatment of novel or rather underdeveloped aspects of the question. Noteworthy as well is the variety of formulations of "generalizability" which reveals quite comprehensively how the multi-faceted character of "the" generalizability

question is tied to differing conceptions and formulations of the nature of GCT and its components. The book has an introduction by the editor and is followed by three Sections: I) Clarifications and Directions for Research, II) Defenses of Generalizability, and III) Challenges to Generalizability.

I cannot here review each of the papers to the extent they deserve and this primarily because of space. One undertakes a review of fourteen scholarly papers from two different disciplines, and from across a variety of perspectives, at one's own peril. Despite my best efforts, insertions, and the usual constraints, some of the contributors will perhaps feel somewhat shortchanged. However, in light of the merit of three papers, and in an effort to set out the multiple dimensions of the generalizability issue as represented in the book, I will attempt here to outline for the potential reader of this book their respective approaches and positions and highlight what I take to be some of their major claims and contributions. My classification and arrangement of these papers differs from the order in which they appear in the book.

The papers by Robert Louis ("The Degree to Which Critical Thinking is Subject Specific: Clarification and Needed Research") and Ralph Johnson ("The Problem of Defining Critical Thinking") both provide important critical reviews of the state of the art as they see it. Louis' paper gives a comprehensive account of the
