Generalized Cauchy Riemann Systems With A Singular Point:

Generalized Cauchy-Riemann Systems with a Singular Point Zafar D Usmanov, 2020-04-28 A theory of generalized Cauchy Riemann systems with polar singularities of order not less than one is presented and its application to study of infinitesimal bending of surfaces having positive curvature and an isolated flat point is given The book contains results of investigations obtained by the author and his collaborators

Operator Theory and Harmonic Analysis Alexey N. Karapetyants, Vladislav V. Kravchenko, Elijah Liflyand, Helmuth R. Malonek, 2021-09-27 This volume is part of the collaboration agreement between Springer and the ISAAC society This is the first in the two volume series originating from the 2020 activities within the international scientific conference Modern Methods Problems and Applications of Operator Theory and Harmonic Analysis OTHA Southern Federal University in Rostov on Don Russia This volume is focused on general harmonic analysis and its numerous applications The two volumes cover new trends and advances in several very important fields of mathematics developed intensively over the last decade The relevance of this topic is related to the study of complex multiparameter objects required when considering operators and objects with variable parameters

On First and Second Order Planar Elliptic Equations with Degeneracies Abdelhamid Meziani, 2012 This paper deals with elliptic equations in the plane with degeneracies The equations are generated by a complex vector field that is elliptic everywhere except along a simple closed curve Kernels for these equations are constructed Properties of solutions in a neighborhood of the degeneracy curve are obtained through integral and series representations An application to a second order elliptic equation with a punctual singularity is given

Complex Methods for Partial Differential Equations Heinrich Begehr, A. Okay Celebi, W. Tutschke, 2013-12-01 This volume is a collection of manuscripts mainly originating from talks and lectures given at the Workshop on Recent Trends in Complex Methods for Partial Differential Equations held from July 6 to 10 1998 at the Middle East Technical University in Ankara Turkey sponsored by The Scientific and Technical Research Council of Turkey and the Middle East Technical University This workshop is a continuation of two workshops from 1988 and 1993 at the International Centre for Theoretical Physics in Trieste Italy entitled Functional analytic Methods in Complex Analysis and Applications to Partial Differential Equations Since classical complex analysis of one and several variables has a long tradition it is of high level But most of its basic problems are solved nowadays so that within the last few decades it has lost more and more attention The area of complex and functional analytic methods in partial differential equations however is still a growing and flourishing field in particular as these methods are not only applied Within the framework of holomorphic functions but are also combined with properties of generalized analytic functions This can be seen by the many books which recently were published in this field and also by the proceedings in this ISAAC series and the ISAAC congresses and workshops

This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathematics. It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977-1985. The annotated translation consists of ten volumes including a special index volume. There are three kinds of articles in this ENCYCLOPAEDIA. First of all, there are survey type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used. The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible. On the whole, these articles should be understandable to mathematics students in their first specialization years, to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science, engineers and teachers of mathematics. These articles treat their material at a fairly general level and aim to give an idea of the kind of problems, techniques and concepts involved in the area in question. They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions. The second kind of article of medium length contains more detailed concrete problems, results and techniques.

A New Class of Singular Integral Equations and Its Application to Differential Equations with Singular Coefficients L. G. Mikhailov, 1970-12-31. No detailed description available for A New Class of Singular Integral Equations and Its Application to Differential Equations with Singular Coefficients. **Singular Integral Operators** Solomon G. Mikhlin, Siegfried Prößdorf, 1987. The present edition differs from the original German one mainly in the following additional material: weighted norm inequalities for maximal functions and singular operators 12; Chap XI polysingular integral operators and pseudo differential operators 7-8; Chap XII and spline approximation methods for solving singular integral equations 4; Chap XVII. Furthermore, we added two subsections on polynomial approximation methods for singular integral equations over an interval or with discontinuous coefficients Nos 3-6 and 3-7; Chap XVII. In many places we incorporated new results which in the vast majority are from the last five years after publishing the German edition. Note that the references are enlarged by about 150 new titles. S. G. Mikhlin wrote 7-8; Chap XII and the other additions were drawn up by S. Prößdorf. We wish to express our deepest gratitude to Dr A. Bottcher and Dr R. Lehmann who together translated the text into English carefully and with remarkable expertise. *N-Dimensional Quasiconformal (QCf) Mappings* Petru Caraman, 1974.

Siberian Mathematical Journal, 1993. **Solvability Theory of Boundary Value Problems and Singular Integral Equations with Shift** Georgii S. Litvinchuk, 2012-12-06. The first formulations of linear boundary value problems for analytic functions were due to Riemann 1857. In particular, such problems exhibit as boundary conditions relations among values of the unknown analytic functions which have to be evaluated at different points of the boundary. Singular integral equations with a shift are connected with such boundary value problems in a natural way. Subsequent to Riemann's work, D. Hilbert 1905, C. Haseman 1907 and T. Carleman 1932 also considered problems of this type. About 50 years ago, Soviet

mathematicians began a systematic study of these topics The first works were carried out in Tbilisi by D Kveselava 1946
 1948 Afterwards this theory developed further in Tbilisi as well as in other Soviet scientific centers Rostov on Don Ka zan
 Minsk Odessa Kishinev Dushanbe Novosibirsk Baku and others Beginning in the 1960s some works on this subject appeared
 systematically in other countries e g China Poland Germany Vietnam and Korea In the last decade the geography of
 investigations on singular integral operators with shift expanded significantly to include such countries as the USA Portugal
 and Mexico It is no longer easy to enumerate the names of the all mathematicians who made contributions to this theory
 Beginning in 1957 the author also took part in these developments Up to the present more than 600 publications on these
 topics have appeared **Progress In Analysis, Proceedings Of The 3rd Isaac Congress (In 2 Volumes)** Heinrich G W
