

POWER OUTAGES

PROTECT YOUR HOME WHEN THE POWER GOES OUT

Power outages can lead to more than just your lights going out. Forcing sensitive electronics to shutdown unexpectedly can result in data loss or damage to electrical systems. When power returns, a surge can damage TVs, appliances, and even heating and AC systems. Power outages can be impossible to predict, so be sure to prepare your home with the following devices.

PREPARE YOUR HOME FOR POWER OUTAGES:

BEFORE or DURING Power Outages

Uninterruptible power supplies (UPS) can **protect** against all **power disturbances**. These work by providing battery backup to critical electronics to protect them from sudden shutoffs.

Uninterruptible Power Supplies

Energy Storage

during **service interruptions**. These can be used to power critical systems in your home. Energy storage systems can be paired with home solar power to become more energy independent. Utilities **may offer incentives** for energy storage systems.

Smart meters allow for **greater communication** between your home's electrical needs and your energy provider. These can help you **reduce energy costs** and provide utilities with more information on how much electricity is being used in their service areas.

Smart Meters

Generators & Transfer Switches

Both portable and standby generators should be used with a transfer switch to prevent unintentional energization of surrounding areas which could cause harm to utility workers or neighbors. **Install CO detectors** and keep generator at least **20 feet** from homes and away from doors and windows.

Generators provide **energy during power interruptions**

RECOVERING from Power Outages

SPDs **protect** against voltage **spikes** that can cause damage to your electronics when full power is restored. Whole home surge protection is required in the **2020 National Electrical Code**.
