Generic Model Management:

Generic Model Management Sergey Melnik, 2004-04-28 Many challenging problems in information systems engineering involve the manipulation of complex metadata artifacts or models such as database schema interface specifications or object diagrams and mappings between models Applications solving metadata manipulation problems are complex and hard to build The goal of generic model management is to reduce the amount of programming needed to solve such problems by providing a database infrastructure in which a set of high level algebraic operators are applied to models and mappings as a whole rather than to their individual building blocks This book presents a systematic study of the concepts and algorithms for generic model management The first prototype of a generic model management system is described the algebraic operators are introduced and analyzed and novel algorithms for implementing them are developed Using the prototype system and the operators presented solutions are developed for several practically relevant problems such as change propagation and reintegration

Model Driven Architecture - Foundations and Applications Ina Schieferdecker, Alan Hartman, 2008-06-06 The fourth edition of the European Conference on Model Driven Architecture Foundations and Applications ECMDA FA 2008 was dedicated to furthering the state of knowledge and fostering the industrialization of the model driven architecture MDA methodology. MDA is an initiative proposed by the Object Management Group (OMG) for platform generic software development. It promotes the use of models in the specification design analysis synthesis deployment and evolution of complex software systems. ECMDA FA 2008 focused on engaging key European and international researchers and practitioners in a dialogue which will result in a stronger more efficient industry producing more reliable software on the basis of state of the art research results. ECMDA FA is a forum for exchanging information discussing the latest results and arguing about future developments of MDA. It is a pleasure to be able to introduce the proceedings of ECMDA FA 2008. ECMDA FA addresses various MDA areas including model management executable models concrete syntaxes aspects and concerns validation and testing model based systems engineering model driven development and service oriented architectures and the application of model driven development. There are so many people who deserve warm thanks and gratitude for the fruitful collaboration of the Organization Steering and Program Committee members and the vibrant community led to a successful conference ECMDA FA 2008.

Obtained excellent results in terms of submissions program size and attendance. The Program Committee accepted with the help of additional reviewers research papers and industry papers for ECMDA FA 2008. We received 87 submissions. Of these a total of 31 were accepted including 21 research papers and 10 industry papers. We thank them for the thorough and high quality selection process.

Conceptual Modeling - ER 2005 Christian Kop, Heinrich C. Mayr, John Mylopoulos, Óscar Pastor, 2005-10-11 Conceptual modeling is fundamental to any domain where one must cope with complex real world situations and systems because it fosters communication between technology experts and those who would benefit from the application of those technologies Conceptual modeling is the key mechanism for understanding and representing the domains of information system and database engineering but also increasingly for other domains including the new virtual environments and the information systems that support them The importance of conceptual modeling in software engineering is evidenced by recent interest in model driven architecture and extreme non programming Conceptual modeling also plays a prominent role in various technical disciplines and in the social sciences The Annual International Conference on Conceptual Modeling referred to as the ER Conference provides a central forum for presenting and discussing current research and applications in which conceptual modeling is the major emphasis In keeping with this tradition ER 2005 the 24th ER Conference spanned the spectrum of conceptual modeling including research and practice in areas such as theories of concepts and ontologies underlying conceptual modeling methods and tools for developing and communicating conceptual models and techniques for transforming conceptual models into effective information system implementations Moreover new areas of conceptual modeling including Semantic Web services and the interdependencies of conceptual modeling with

knowledge based logical and linguistic theories and approaches were also addressed

of Conceptual Modeling David W. Embley, Bernhard Thalheim, 2012-04-23 Conceptual modeling is about describing the semantics of software applications at a high level of abstraction in terms of structure behavior and user interaction Embley and Thalheim start with a manifesto stating that the dream of developing information systems strictly by conceptual modeling as expressed in the phrase the model is the code is becoming reality The subsequent contributions written by leading researchers in the field support the manifesto's assertions showing not only how to abstractly model complex information systems but also how to formalize abstract specifications in ways that let developers complete programming tasks within the conceptual model itself They are grouped into sections on programming with conceptual models structure modeling process modeling user interface modeling and special challenge areas such as conceptual geometric modeling information integration and biological conceptual modeling The Handbook of Conceptual Modeling collects in a single volume many of the best conceptual modeling ideas techniques and practices as well as the challenges that drive research in the field Thus it is much more than a traditional handbook for advanced professionals as it also provides both a firm

foundation for the field of conceptual modeling and points researchers and graduate students towards interesting challenges and paths for how to contribute to this fundamental field of computer science
