Genes for Sale Joseph Henry Vogel, 1994 With each species lost to the mass extinction crisis the natural economy of the nation and of the world is greatly diminished An endangered animal may hold the cure for cancer a threatened plant could someday become a major food crop and even bacteria often provide novel molecular structures in polymer science As the rainforest is destroyed and habitats are degraded conservationists are now urgently searching for dramatic new ways to save these economic resources In this provocative and important book Joseph Henry Vogel details one potential solution that has met with increasing interest and popularity the privatization of genetic information Vogel cogently makes the case that the world should abandon the doctrine of the common heritage of mankind and create private property rights over genes Landowners once vested with the genetic resources on their land will have a newfound financial incentive to protect what they now already control *Genes for Sale* provides an overview of the many complexities inherent in implementing a viable conservation policy Vogel elaborates both technical issues like the construction of a gargantuan database of landtitles and biological inventories and political issues like legal reform Clearly written engaging and timely *Genes for Sale* provides students scientists and policy makers alike with the ideal introduction to an exciting and controversial new approach to saving our precious living heritage

Biological Diversity L. N. Petrov, 2003 One of the cornerstones of life s wonders is the vast array of species filling the planet From plants to animals to humans there is no shortage of beings to provide spice of life variety is said to be Periodically scientists announce the discovery of a new form of life so it seems as if Earth is capable of producing new species just to keep us on our toes At times the immense breadth of living things can even feel overwhelming as one pauses to ponder how numerically insignificant humans are when

compared to the insect population Given the biological diversity of the planet it is incumbent upon humans to safeguard the natural beauty of the environment To that end conservation takes on special importance necessitating the balancing of industrial expansion with preserving the flora and fauna surrounding us This book is an important tool in understanding and researching the many different life forms spanning the globe Collected here is a substantial and carefully selected listing of relevant literature on biological diversity and its conservation Following this bibliography are author title and subject indexes to allow for further access to this information The sheer bulk of the works about biological diversity can be so intimidating that a book such as this one becomes useful in sorting through the resources about the importance of life s variety

Conservation of Genetic Resources Detlef Virchow,2012-12-06 Over the past decade the importance of natural resources for sustainable agricultural development has been increasingly discussed at international forums and conferences Aside from the sustainable management of soil water and air it now seems to be accepted that the sustainable management of genetic resources is one of the four indispensable preconditions for a sustainable agriculture The discussion on conservation of plant genetic resources for food and agriculture PGRFA however has to reflect the costs of conservation as well These have not yet been discussed intensively The study analyzes the conservation costs of plant genetic resources it also assesses the effectiveness of conservation and the efficiency of the different conservation instruments It is based on extensive surveys in relevant countries Following the detailed cost and impact analysis the results show that the effectiveness of conservation strategies may be increased

Genes in the Field International Plant Genetic Resources Institute,International Development Research Centre (Canada),2000 Genes in the Field provides an interdisciplinary foundation for an important new conservation program maintaining biological resources of crop plants within the systems where they have evolved The book offers a truly global vision of the on farm conservation movement and like no other before it provides a comprehensive review of the issues and challenges of on farm conservation of genetic resources The book s chapters are written by a collection of outstanding scholars and academics from a variety of disciplines they include biologists agronomists anthropologists economists lawyers and agricultural development specialists Genes in the Field is truly global in scope and multidisciplinary in character It will appeal to a large varied and international audience Its most general appeal will be to professionals in the fields of conservation and agricultural development particularly those who are involved in planning or implementing conservation programs For course work the book will be appropriate for graduate programs in agricultural development and conservation

Forest Resource Policy in Latin America Ronnie de Camino,Julio C. Tresierra,Ramón López,Thomas Kelly,Markku Simula,Kari Keipi,Carlos Felipe Jaramillo,Olli Haltia,Jared J. Hardner,Marc J. Dourojeanni,Jan G. Laarman,Richard Rice,2000-01-01 Forest Resource Policy in Latin America gathers the thinking of a score of experts on sustainable use and management of forests including incentives for investment The authors tackle the thorny social issues of property rights deforestation and forest management and ownership by indigenous people and take a hard

look at the trade and environmental issues in forest production that will affect future directions for sustainable forestry development in Latin America Some argue that the main opportunity to conserve natural forests lies in recognizing and paying for the environmental services they provide In addition compensatory measures such as the establishment and better management of strictly protected areas appear to be the best tools to delay the loss of ecosystems and species Alternative forest concession policies and trade and environmental issues in forest production are also analyzed **Marshaling**

Technology for Development Technology and Development Steering Committee,Office of International Affairs,Policy and Global Affairs,National Research Council/World Bank,1995-10-20 Recent technological advances particularly in microelectronics and telecommunications biotechnology and advanced materials pose critical challenges and opportunities for developing countries and for the development banks and other organizations that serve them Those countries that fail to adapt to the transformations driven by new technologies in industry agriculture health environment energy education and other sectors may find it difficult to avoid falling behind This book represents a joint effort by the World Bank and the National Research Council to survey the status and effect of technology change in key sectors and to recommend action by the development organizations government private sector and the scientific and technological community **Integrating Implementation of the Convention on Biological Diversity and the Rules of the World Trade Organization** David R. Downes,1999 In the 1990s the international community placed both biodiversity protection and trade liberalization high on its agenda resulting in the formation of global agreements and institutions such as the 1992 Convention on Biological Diversity CBD and the World Trade Organization WTO Distinct in character they are increasingly linked through the many ways that trade rules affect biodiversity Developing separately and involving very different communities there is a risk that the rules and policies of one regime could hinder the effectiveness of the other This publication seeks to encourage sustainable development by examining and building upon the complementary aspects of these two international regimes It describes specific proposals for resolving or avoiding conflicts and for promoting synergies including opportunities to support effective implementation of the trade related aspects of the CBD Intended as background for both trade and environment experts and officials as well as for environment and development non governmental organizations **Biotechnology** ,1996

World in Transition 4 German Advisory Council On Global Change (Wbgu),2013-09-13 At the start of the 21st century fighting poverty and protecting the environment are two of the most urgent challenges facing the international community Environmental changes will jeopardize people s survival to an even greater extent in the future and will hit the poor hardest To meet these challenges it will be essential to breathe new life into the partnership between industrialized and developing countries It will be equally essential to combine poverty reduction with environmental protection in an integrated policy structure spanning all levels from local to global In this report the German Advisory Council on Global Change WBGU shows that global environmental policy is a prerequisite for global poverty reduction WBGU analyses the relevant policy processes

and delivers recommendations charting the way forward With its interdisciplinary approach providing a complex and systematic analysis of the poverty environment nexus WBGU s latest report breaks new ground Indira Gandhi s old convenient maxim was Poverty is the biggest polluter Put forward at the 1972 UN Conference on the Human Environment in Stockholm it has been sorely misused ever since to override environmental precaution and prioritize economic development strategies instead The new WBGU report maps out a way to shape a coherent environment and development policy This report revitalizes the Rio spirit and gives it a robust scientific base Prof Dr Ernst Ulrich von Weizsäcker Member of the German Bundestag MdB **Economics of Deforestation** Sven Wunder,2000-07-19 Tropical forests are disappearing at an unaltered pace giving way to alternative land uses This book gives an economic perspective on deforestation Following a survey of different deforestation definitions theories and empirical evidence a case study of Ecuador provides a versatile historical picture of factors affecting forest loss throughout different periods regions and ecosystems It is shown that policy and market failures alone cannot explain rapid deforestation decision makers follow a composite economic rationale in their continuous clearing of forests which can only be counteracted by concerted action Describing Species Judith E. Winston,1999 A basic practical manual for the process of describing new species this desperately needed desk reference and guide to nomenclatural procedure and taxonomic writing serves as a Strunk White of species description covering both botanical and zoological codes of nomenclature Sustaining Liberal Democracy M. Wissenburg,J. Barry,2001-04-19 Assuming that liberalism liberal democracy and the free market are here to stay this book asks how sustainability can be interpreted in ways that respect liberal democratic values and institutions Among the problems addressed are the compatibility of liberal proceduralism with substantive green ideals the existence and potential of eco friendly principles and ideas in classical liberal political theory the role of rights and duties and of democracy and deliberation and the greening potential of modern environmental focused practices in liberal democracies The Custodians of Biodiversity Manuel Ruiz,Ronnie Vernooy,2012-03-15 Globally local and indigenous approaches to conserving biodiversity crop improvement and managing precious natural resources are under threat Many communities have to deal with biopiracy for example As well existing laws are usually unsuitable for protecting indigenous and traditional knowledge and for recognizing collective rights such as in cases of participatory plant breeding where farmers researchers and others join forces to improve existing crop varieties or develop new ones based on shared knowledge and resources This book addresses these issues It outlines the national and international policy processes that are currently underway to protect local genetic resources and related traditional knowledge and the challenges these initiatives have faced In particular these themes are addressed within the context of the Convention of Biological Diversity and the International Treaty on Plant Genetic Resources for Food and Agriculture The authors broaden the policy and legal debates beyond the sphere of policy experts to include the knowledge holders themselves These are the custodians of biodiversity farmers herders and fishers in local communities Their

experience in sharing access and benefits to genetic resources is shown to be crucial for the development of effective national and international agreements The book presents and analyzes this experience including case studies from China Cuba Honduras Jordan Nepal Peru and Syria Copublished with the International Development Research Centre IDRC
