Genes Gender First In A Series On Hereditarianism And Women:

Sex Itself Sarah S. Richardson, 2013-12-13 Human genomes are 99.9 percent identical with one prominent exception. Instead of a matching pair of X chromosomes men carry a single X coupled with a tiny chromosome called the Y. Tracking the emergence of a new and distinctive way of thinking about sex represented by the unalterable simple and visually compelling binary of the X and Y chromosomes *Sex Itself* examines the interaction between cultural gender norms and genetic theories of sex from the beginning of the twentieth century to the present postgenomic age. Using methods from history, philosophy and gender studies of science, Sarah S. Richardson uncovers how gender has helped to shape the research practices, questions asked, theories and models and descriptive language used in sex chromosome research. From the earliest theories of chromosomal sex determination to the mid-century hypothesis of the aggressive XYY supermale to the debate about Y chromosome degeneration to the recent claim that male and female genomes are more different than those of humans and chimpanzees, Richardson shows how cultural gender conceptions influence the genetic science of sex. Richardson shows how sexual science of the past continues to resonate in ways both subtle and explicit in contemporary research on the genetics of sex and gender. With the completion of the Human Genome Project, genes and chromosomes are moving to the center of the biology of sex. *Sex Itself* offers a compelling argument for the importance of ongoing critical dialogue on how cultural conceptions of gender operate within the science of sex.

Who Knows Lynn Nelson, 2010-07-02 Establishes a framework for a much needed dialogue between feminist science critics and other scientists and scholars about the nature of science.

The question whether humans are innately aggressive or cooperative eventually receded but the oppositional nature/nurture binary created in the course of the debate left a lasting legacy that would underpin subsequent discussions of human behavior. *Teaching Science and Health from a Feminist Perspective* Sue Vilhauer Rosser, 1986 *The Making of the Unborn Patient* Monica J.
