Parasite Antigens, Parasite Genes R. M. Maizels, 1991 Enzymes 8 *Genetics of Host and Parasite* D. Wakelin, D. Walliker, Leslie H. Chappell, 1996 This collection of articles edited by D Wakelin and D Walliker include Genetic variability in parasites and host parasite interactions Host genetics and infectious disease T cell and cytokine basis of host variability in response to intestinal nematode infections The role of MHC and non MHC associated genes in determining the human immune response to malaria antigens Influence of host and parasite genotypes on immunological control of Theileria parasites Genetic susceptibility to leishmanial infections studies in mice and man Genetic susceptibility to malaria and other infectious diseases from MHC to the whole genome This volume is the specially commissioned supplement to the journal Parasitic Nematodes SH Antigens, Membranes & Genes Malcolm W. Kennedy, 1991-07-01 Parasitology volume 112 A review of current knowledge of nematode parasites which cause widespread mortality and disability in both man and animal resulting in major economic and clinical implications and of the molecular techniques which are now being used to understand immunological mechanisms Parasite Antigens, Genome Analysis of Protozoan Parasites International Parasite Antigens in Protection, Diagnosis and Escape Laboratory for Research on Animal Diseases, 1993-01-01 R.M.E. Parkhouse, 2013-06-29 An estimated 2 3 billion people in the less developed countries suffer from infections often multiple caused by a variety of parasitic organisms. These infections are frequently debilitating rather than fatal and the toll in human misery is fearsome To this may be added the prevalence of similar diseases in do mestic animals which diminish supplies of animal pro tein As the world population increases the already enormous problem also continues to grow The resources of the less developed nations are inadequate for solving the problem and in the developed countries a lack of interest in tropical diseases has meant low priority for research Two recent methodological advances now raise the real possibility of a systematic and effective attack upon these diseases hybridoma and recombinant nucleic acid technologies The combination of these with the still necessary clinical parasitological and immunological in formation permits a logical planned and realistic approach to diagnosis and treatment The central aim of these modem tech niques is to define antigens with regard to diagnosis protection and pathology In the case of some diseases work has already commenced along these lines in the case of others knowledge lags a long way behind This volume represents a summary of current knowledge about a wide representative spectrum of tropical diseases There is considerable common ground between the different infections as regards objectives and the methods for achieving them Genetics (Loose-Leaf) Benjamin A.
