Stanley's Dream Jacalyn Duffin,2019-08-30 In 1964 65 an international team of thirty eight scientists and assistants led by Montreal physician Stanley Skoryna sailed to the mysterious Rapa Nui Easter Island to conduct an unprecedented survey of its biosphere Born of Cold War concerns about pollution overpopulation and conflict and initially conceived as the first of two trips the project was designed to document the island s status before a proposed airport would link the one thousand people living in humanity s remotest community to the rest of the world its germs genes culture and economy Based on archival papers diaries photographs and interviews with nearly twenty members of the original team Stanley s Dream sets the expedition in its global context within the early days of ecological research and the understudied International Biological Program Jacalyn Duffin traces the origins the voyage the often complicated life within the constructed camp the scientific preoccupations the role of women the resultant reports films and publications and the previously unrecognized accomplishments of the project including a goodwill tour of South America the delivery of vaccines and the discovery of a wonder drug For Rapa Nui the expedition coincided with its rebellion against the colonizing Chilean military resulting in its first democratic election For Canada it reflected national optimism as the country prepared for its centennial and adopted its own flag Ending with Duffin s own journey to the island to uncover the legacy of the study and the impact of the airport and to elicit local memories Stanley s Dream is an entertaining and poignant account of a long forgotten but important Canadian led international expedition **The Gene** Siddhartha Mukherjee,2016-05-17 The 1 NEW YORK TIMES Bestseller The basis for the PBS Ken Burns Documentary *The Gene* An Intimate History Now includes an excerpt from Siddhartha Mukherjee s new book *Song of the Cell* From the Pulitzer Prize winning author of *The Emperor of All Maladies* a fascinating history of the gene and a magisterial account of how human minds have laboriously ingeniously picked apart what makes us tick Elle Sid Mukherjee has the uncanny ability to bring together science history and the future in a way that is understandable and riveting guiding us through both time and the mystery of life itself Ken Burns Dr Siddhartha Mukherjee dazzled readers with his Pulitzer Prize winning *The Emperor of All Maladies* in 2010 That achievement was evidently just a warm up for his virtuoso performance in *The Gene* An Intimate History in which he braids science history and memoir into an epic with all the range and biblical thunder of *Paradise Lost* The New York Times In this biography Mukherjee brings to life the quest to

understand human heredity and its surprising influence on our lives personalities identities fates and choices Mukherjee expresses abstract intellectual ideas through emotional stories and swaddles his medical rigor with rhapsodic tenderness surprising vulnerability and occasional flashes of pure poetry The Washington Post Throughout the story of Mukherjee's own family with its tragic and bewildering history of mental illness reminds us of the questions that hang over our ability to translate the science of genetics from the laboratory to the real world In riveting and dramatic prose he describes the centuries of research and experimentation from Aristotle and Pythagoras to Mendel and Darwin from Boveri and Morgan to Crick Watson and Franklin all the way through the revolutionary twenty first century innovators who mapped the human genome A fascinating and often sobering history of how humans came to understand the roles of genes in making us who we are and what our manipulation of those genes might mean for our future Milwaukee Journal Sentinel The Gene is the revelatory and magisterial history of a scientific idea coming to life the most crucial science of our time intimately explained by a master The Gene is a book we all should read USA TODAY

Gene Therapy for Diseases of the Lung Kenneth Brigham, 2020-10-14 This up to the minute and comprehensive resource lucidly covers gene therapy for lung diseases from existing technologies delivering foreign DNA to the lungs via the airways or circulation to promising new approaches for the further development of safe and efficient gene delivery systems

Immunologists and Virologists Dean Miller, 2014-01-01 In this book a breakdown of the life and work of some of history's pioneers in the study of immunologists and virologists are thoroughly explored As the world becomes more connected and bacteria become more antibiotic resistant the importance of research within these two fields is becoming dier MRSA Zika SARS and Ebola are just some of the recent outbreaks that have affected our communities This opportune volume provides excellent biographical sketches for trailblazers in this area of science and will inspire readers to explore the top scientific contributors of the 21st century

Virus Mania Torsten Engelbrecht, Claus Köhnlein, Samantha Bailey, Stefano Scoglio, 2021-04-22 The book Virus Mania has been written with the care of a master craftsman courageously evaluating the medical establishment the corporate elites and the powerful government funding institutions Wolfgang Weuffen MD Professor of Microbiology and Infectious Epidemiology The book Virus Wahn can be called the first work in which the errors frauds and general misinformations being spread by official bodies about doubtful or non virus infections are completely exposed Gordon T Stewart MD professor of public health and former WHO advisor The population is terrified by reports of so called COVID 19 measles swine flu SARS BSE AIDS or polio However the authors of Virus Mania investigative journalist Torsten Engelbrecht Dr Claus Köhnlein MD Dr Samantha Bailey MD and Dr Stefano Scoglio BSc PhD show that this fearmongering is unfounded and that virus mayhem ignores basic scientific facts The existence the pathogenicity and the deadly effects of these agents have never been proven The book Virus Mania will also outline how modern medicine uses dubious indirect lab tools claiming to prove the existence of viruses such as antibody tests and the polymerase chain reaction PCR The alleged viruses may be in fact also be seen as particles

produced by the cells themselves as a consequence of certain stress factors such as drugs. These particles are then picked up by antibody and PCR tests and mistakenly interpreted as epidemic causing viruses. The authors analyze all real causes of the illnesses named COVID 19, avian flu, AIDS or Spanish flu among them: pharmaceuticals, lifestyle, drugs, pesticides, heavy metals, pollution, malnutrition and stress. To substantiate it, the authors cite dozens of highly renowned scientists among them the Nobel laureates Kary Mullis, Barbara McClintock, Walter Gilbert and Sir Frank Macfarlane Burnet as well as microbiologist and Pulitzer Prize winner Ren Dubos and it presents more than 1 400 solid scientific references. The topic of Virus Mania is of pivotal significance. Drug makers and top scientists rake in enormous sums of money and the media boosts its audience ratings and circulations with sensationalized reporting. The coverage of the New York Times and Der Spiegel are specifically analyzed. The enlightenment about the real causes and true necessities for prevention and cure of illnesses is falling by the wayside. For more reviews see the older edition of Virus Mania.

Intrinsic mutagenesis Burnet MacFarlane, 2012-12-06. This book is something which almost accidentally has developed very differently from how it was initially planned. The intention was to elaborate the part played by the immune system in ageing with the role of the thymus as central theme. It was to be essentially an expansion of a lecture I gave in 1970 and would inevitably have been concerned with much the same material as Walford's book *The Immunologic Theory of Aging* though from a different slant. What changed its character arose from a series of attempts to find logical connection between two findings that most gerontologists regard as axiomatic: that the lifespan of a mammal is genetically determined and that the actual process of ageing is an accumulation of genetic error of somatic mutations. It is possible that the connection is so indirect, circuitous and multiform that generations of detailed and unattractive research will be needed to elucidate it or more likely the whole matter discarded as a non problem. But a more inspiring approach does seem possible. The working hypothesis which halfway through its writing became the new central theme of the book arose when I was a member of a committee appointed by the Australian Academy of Science at the request of the Australian Government to advise on the danger from French nuclear tests in the South Pacific.

The Politics of Immunity Mark Neocleous, 2022-03-22. The violence and destruction hiding behind the obsession with immunity. Our contemporary political condition is obsessed with immunity. The immunity of bodies and the body politic, personal immunity and herd immunity, how to immunize the social system against breakdown. The obsession intensifies with every new crisis and the mobilization of yet more powers of war and police from quarantine to border closures and from vaccination certificates to immunological surveillance. Engaging four key concepts with enormous cultural weight: Cell, Self, System and Sovereignty. *Politics of Immunity* moves from philosophical biology to intellectual history and from critical theory to psychoanalysis to expose the politics underpinning the way immunity is imagined. At the heart of this imagination is the way security has come to dominate the whole realm of human experience. From biological cell to political subject and from physiological system to the social body, immunity folds into security just as security folds into immunity. The book thus opens into a critique of the

violence of security and spells out immunity's tendency towards self destruction and death immunity like security can turn its aggression inwards into the autoimmune disorder Wide ranging and polemical Politics of Immunity lays down a major challenge to the ways in which the immunity of the self and the social are imagined **Plant Lipids** Denis J.

Murphy, 2020-02-03 New research tools have revealed many surprising aspects of the dynamic nature of lipids and their participation in processes such as recognition intra and inter cellular signalling deterrence and defense against pathogens membrane trafficking and protein function This is in addition to new information on the more established roles of plant lipids as structural components of membranes and as long term storage products Plant lipids are also increasingly being seen as sources of a new generation of environmentally friendly biodegradable and renewable industrial products including biopolymers and high grade lubricants Plant Lipids Biology Utilisation and Manipulation provides a broad overview of plant lipid research and its many applications Linking various disciplines the editor brings together researchers from major international laboratories to review the history and current state of progress in this quickly evolving field The text starts by providing a fascinating historical perspective on the study of plant lipids from its inception as a branch of alchemy in the seventeenth century to the current post genomic era It then offers a detailed discussion on the formation modification and utilization of fatty acids This is followed by an exploration of the major classes of macromolecular structures formed by plant lipids including bilayer membranes and storage bodies From there the contributors consider other types of macromolecular lipid assemblies in plants examining proteins and the key plant lipid structure the cuticle The final chapters look at diverse classes of plant lipids that are linked to various aspects of signaling This text provides an excellent resource for researchers and professionals in plant biochemistry molecular biology biotechnology and genetics in both the academic and industrial sectors It also meets the needs of students looking for a comprehensive introduction to this field as well as direction for fut

Can Medicine Be Cured? Seamus O'Mahony, 2019-02-07 A fierce honest elegant and often hilarious debunking of the great fallacies that drive modern medicine By the award winning author of The Way We Die Now Seamus O Mahony writes about the illusion of progress the notion that more and more diseases can be conquered ad infinitum He punctures the idiocy of consumerism the idea that healthcare can be endlessly adapted to the wishes of individuals He excoriates the claims of Big Science the spending of vast sums on research follies like the Human Genome Project And he highlights one of the most dangerous errors of industrialized medicine an over reliance on metrics and a neglect of things that can't easily be measured like compassion A deeply fascinating and rousing book Mail on Sunday What makes this book a delightful if unsettling read is not just O Mahony's scholarly and witty prose but also his brutal honesty The Times *Public Concerns* Nicholas Rescher, 1995 In this collection of his recent and classic essays distinguished philosopher Nicholas Rescher explores a variety of contemporary public policy issues ranging from the use of quantitative data in social policy making to problems in biomedical ethics Offering a rational approach to questions often treated with more heat than light the essays demonstrate

the usefulness of philosophical reflection on social and political issues and make it clear that questions of moral right and wrong are always relevant *Biocatalysis and Biomolecular Engineering* Ching T. Hou, Jei-Fu Shaw, 2010-10-29 An expert overview of new technologies guiding the construction of a sustainable society This compendium of important insights from sixty distinguished international scholars looks at the significant advances in progressive environmental technology especially the molecular engineering used on plants animals and microorganisms as the game changer in the high stakes race to reverse earth damaging practices Biocatalysis and Biomolecular Engineering covers subject matter on the latest developments in eco friendly and energy saving manufacturing processes with the emphasis on agricultural technology and bio based products Focusing its study on remedies that show promise in curing food and energy ills this book examines groundbreaking work in various fields such as nutraceuticals genetic engineering of agricultural products and bioenergy Biocatalysis and Biomolecular Engineering Can be used as a reference by teachers graduate students and industrial scientists who conduct research in bioscience and biotechnology Serves as the first book to bring together fundamentals and leading edge technologies for the development of bio based industrial products through biocatalysis for example it discusses the preparation of biofunctional micro and nanoparticles Contains chapters by international experts from academia industry and government research institutes Biocatalysis and Biomolecular Engineering builds a cohesive well thought out case for nurturing new discoveries in eco technology by inviting critical discussion on devising viable solutions to sustaining the future wellness of humankind **Science and the Quiet Art** D. J. Weatherall, 1995 A distinguished scientist offers here the clearest explanation yet of how improvements in patient care are related to and depend on biomedical research
