Genesis And Geometry Of The Labyrinth Architecture Hidden Language Myths And Rituals:

The Genesis and Geometry of the Labyrinth Patrick Conty, 2002-12-01 A groundbreaking look at the phenomenon of the labyrinth connecting this ancient symbol to modern scientific principles Illustrated with labyrinths from around the world and throughout history Demonstrates how the labyrinth differs from a maze and how it is a tool for interpreting ancient myths and religious beliefs Draws parallels between the labyrinth and quantum physics showing how through the secrets of the labyrinth we can unlock the mystery of life itself The powerful symbol of the labyrinth exists in countless cultures spanning the globe from Africa and ancient Greece to India China and pre Colombian North and South America For centuries they have been used for religious rituals meditation and spiritual and physical healing In the labyrinth humanity finds a model of the quintessential sacred space that depicts the most profound levels of consciousness Its center is regarded in many cultures as a door between two worlds thus providing individuals with the ideal place for self questioning and meditation In a comprehensive exploration of this time honored symbol Patrick Conty shows how the geometrical construction of the ancient labyrinth corresponds exactly with today s modern geometry illustrating that recent developments in math and physics parallel the science of ancient civilizations By looking at the way the two systems complement each other Conty draws new conclusions about the ancient world and how that world can benefit us right now Conty explores not only physical labyrinths but also reveals how the same transcendent principles are at work in Celtic knot work the designs of ancient Chinese cauldrons the tattoos and tracings of primitive art the textiles of Africa Peru and Central America and the geometric patterns in Islamic art

Cities and Metaphors Somaiyeh Falahat, 2018-04-19 Introducing a new concept of urban space Cities and Metaphors encourages a theoretical realignment of how the city is

experienced thought and discussed In the context of Islamic city studies relying on reasoning and rational thinking has reduced descriptive vivid features of the urban space into a generic scientific framework Phenomenological characteristics have consequently been ignored rather than integrated into theoretical components The book argues that this results from a lack of appropriate conceptual vocabulary in our global body of scholarly literature It challenges existing theories introduces and applies the concept of Hezar tu a thousand insides to rethink the spaces in historic cores of Fez Isfahan and Tunis This tool constructs a staging post towards a different articulation of urban space based on spatial physical virtual symbolic and social edges and thresholds nodes of sociospatial relationships zones of containment state of intermediacy and thus a logic of ambiguity rather than determinacy Presenting alternative narrations of paths through sequential discovery of spaces this book brings the sensual features of urban space into the focus The book finally shows that concepts derived from local contexts enable us to tailor our methods and theoretical structures to the idiosyncrasies of each city while retaining the global commonalities of all Hence in broader terms it contributes to a growing awareness that urban studies should be more inclusive by bringing the diverse global contexts of cities into the body of our urban knowledge

The Sacred Center John Michell, 2009-03-02 The symbolism and power behind sacred locations in ancient and modern times Explains the need and role for ritual centers in modern society Examines ancient territorial centers in ancient Egypt Greece Africa and Asia and Iceland and the British Isles Reveals the code of number and geometry behind the idealistic social structure of the ritual center formed to imitate the heavenly order Symbols of ritual centers are among the most persistent elements of myth and belief between cultures widely separated in time and space Every tribe and state had its generation center a sacred area within its heartland where its legendary founders gave birth to its people and established their laws Within the inner sanctum of the sanctuary was an altar or pillar the omphalos or navel stone that marked the midpoint of the home territory and represented the world pole on which everything revolved It was the focus of a perpetual cycle of rituals and festivals that passed with the seasons around the country and held its people under the spell of a golden age In this book John Michell reveals the precise methods by which the ancients located the appropriate centers and adopted them as sanctuaries The same principles of ritual geography in the siting of Akhenaten's capital in Egypt and Megalopolis in classical Greece apply also to the traditional centers of small territories and islands The rediscovery of these sites such as the spot at the center of Ireland where the Celtic High Kings were installed sheds new light on the ritualized order of prehistoric societies and the sacred scientific code on which they were founded These revelations from the distant past are of great significance in present times for in them are the secrets of harmony on every scale from the personal to the universal Restoring the sacred center to its former place of prominence offers the possibility of a renaissance of human culture ideally centered upon the image of a perfectly ordered Cosmos

Re-imagining the City Somaiyeh Falahat, 2013-12-09 Somaiyeh Falahat investigates the spatial and morphological logic of pre modern Middle Eastern and North African cities so called Islamic cities She bases her

argument on the fact that the city and consequently its form and structure similar to other human products have deep roots in the thought structure of the people Thus to know such places properly one has to refer to this life world and use it as a structure to observe the city This approach aims at opening new levels of understanding of the city by grasping indigenous concepts and structures it puts forward claims for the possibility of a new method of analysis The author studies the historic city of Isfahan as the case study and suggests that an indigenous term Hezar Too can explain the complexity of the city which has been interpreted as labyrinthine and maze like accounting for the essence of the city and its form in an appropriate way Looking at the city from this new point of view can help in observing it in its context and subsequently in discovering its real character

Space and Spatial Cognition Michel Denis, 2017-11-13 All living creatures inscribe their activity in space Human beings acquire knowledge of this space by traversing it listening to verbal descriptions and looking at maps atlases and digital media We memorize routes compare distances mentally and retrieve our starting place after a long journey Space and Spatial Cognition provides an up to date introduction to the elements of human navigation and the mental representation of our environment This book explores the mental capacities which enable us to create shortcuts imagine new pathways and thus demonstrate our adaptation to the environment Using a multidisciplinary approach which draws on
