the construction and exploitation of social connections among experts who act collectively to define solutions to environmental problems This highly original and provoking thesis synthesises some of the more exciting social science concepts and methods while refining our basic understanding of environmental social change and providing policy makers with concrete success factors to replicate This book will be essential reading for academics in the fields of sociology political science international relations network studies human communication motivation collaboration and leadership as well as the burgeoning interdisciplinary field of environmental studies Businesses will also find many applications for practical use Finally the many directly transferable lessons from ozone layer protection make this book a key addition to the growing literature on climate change
