**The Global Warming Desk Reference** Bruce E. Johansen,2001-10-30 With global temperatures rising rapidly during the past quarter century, infrared forcing, popularly known as the greenhouse effect, has attracted worldwide concern. This book is a concise, college-level compendium of the research on global warming. It surveys the scientific consensus on the issue, describes recent findings, and also considers the arguments of skeptics who doubt that global warming is a threat. Suggesting that the effects of global warming can be seen in the melting of glaciers and the dying of coral reefs, the work summarizes the potential impact on human health and on plants and animals worldwide. Concluding with possible solutions, the book contains one of the most comprehensive bibliographies on the subject. A growing field of study with a rapidly expanding literature, global warming should be of interest to everyone on Earth. Evidence of the greenhouse effect, due to emissions of carbon dioxide and other trace gases, has been accumulating for a quarter century. This book covers both research from scientific journals and newspaper and magazine reports of present-day evidence. The book will be a valuable resource for individuals concerned with

**Politics and Climate Change: A History** Andy May,2022-09-04 These are stories of the political corruption of science Politicians work to forge a consensus they use persuasion intimidation and avoid or suppress debate Debating an issue leads to education it shows the question is more complex than it appears it makes the public consider all sides Education leads to caution not action The politician wants a decision he wants action so no debate Once the consensus is formed the public votes laws are passed regulations issued the minority concedes and conflict is avoided Science is not a belief It exists to challenge the consensus view It is how one person can show the overwhelming majority is mistaken Scientists do not vote they debate They gather facts make observations and analyze the data and try to show the consensus opinion is wrong Politicians and scientists don t mix They are like fire and water opposites But what about when no one trusts the politician and he must have a scientist for back up What happens when the government becomes the sole source of research money We address the attempt by politicians to control scientific research and research outcomes They do this by selectively funding projects that look for potential disasters ideally global disasters People love disaster stories journalists love disaster stories scientists love to be quoted in newspapers and on television If you frighten people enough they will give up their rights for security increasing government power So it is not surprising that as government has taken over funding scientific research scientists have migrated from research that helps people to researching possible catastrophes no matter how remote the possibility Science has devolved from improving human lives to developing plots for disaster movies
