Pettman, 2012 International political economy IPE is a highly complex discipline drawing not only from the fields of politics and economics but also those as varied as philosophy history and anthropology Now widely accepted as a key dimension to contemporary world affairs it is no longer possible to talk about international relations without talking about production and distribution finance and investment as well as consumption and trade To ensure that our understanding of these topics is relevant to today's world there is a constant need to revisit and challenge what is known about these topics Besides being a comprehensive account of international political economy for academic study this extensive collection also highlights salient issues that scholars analysts and state leaders are most concerned with in today's world Amongst these are issues concerning the rise of China and India as new economic superpowers stability in the EU's political economy the viability of the existing multilateral system of global trade recent financial crises as well as the impact of globalisation and marketisation on the world's workers and our physical environment With contributions from prominent academics such as Susan K Sell George Washington University D C and Geoffrey Blainey Professor Emeritus University of Melbourne this volume makes for both a stimulating and thought provoking read *The Code for Global Ethics* Rodrigue Tremblay, 2010-12 Humanists have long contended that morality is a strictly human concern and should be independent of religious creeds and dogma This principle was clearly articulated in the two Humanist Manifestos issued in the mid twentieth century and in Humanist Manifesto 2000 which appeared at the beginning of the twenty first century Now this code for global ethics further elaborates ten humanist principles designed for a world community that is growing ever closer together In the face of the obvious challenges to international stability from nuclear proliferation environmental degradation economic turmoil and reactionary and sometimes violent religious movements a code based on the natural dignity and inherent worth of all human beings is needed more than ever In separate chapters the author delves into the issues surrounding these ten humanist principles preserving individual dignity and equality respecting life and property tolerance sharing preventing domination of others eliminating superstition conserving the natural environment resolving differences cooperatively without resort to

violence or war political and economic democracy and providing for universal education This forward looking optimistic and eminently reasonable discussion of humanist ideals makes an important contribution to laying the foundations for a just and peaceable global community      Global Capitalism and Climate Change Hans A. Baer,2012-06-28 Many progressive scholars particularly in the social sciences have increasingly come to acknowledge that anthropogenic climate change constitutes yet another contradiction of global capitalism This book constitutes an effort to develop a critical social science of climate change one that posits its roots in global capitalism with its emphasis on profit making a treadmill of production and consumption heavy reliance on fossil fuels and commitment to ongoing economic expansion It explores the systemic changes necessary to create a more socially just and sustainable world system that would possibly start to move humanity toward a safer climate and discusses the role of a burgeoning climate movement in this effort      **Reducing Your Carbon Footprint At Home** Sarah B. David,2008-08-15 This book explores how to live green at home Describes straightforward ways for people to change their habits and increase sustainability      **Environmental Lobbying at the United Nations** Felix Dodds,Chris Spence,2025-06-12 This book provides a step by step insiders guide on how to lobby and engage successfully at the United Nations It reveals how the United Nations which plays such a key role on issues from climate change to pollution of our air land and sea really works In a world of rapid climate change a flood of forever chemicals and plastic pollution and the extinction of so much wildlife around the world we need the convening power of the United Nations now more than ever What s more we need individuals and organisations dedicated to making sure the United Nations has the most positive impact it can And yet global diplomacy can be dauntingly challenging and complex Drawing on the authors combined 60 years of professional experience with the United Nations system this book contains essential information for individuals and organisations seeking to engage in this complex and confusing world From the very basic question of how to ensure you can even attend the event this book offers hard to find information to help readers through this labyrinth including insider acronyms and language how and when are the best times to put your issue forward to achieve maximum impact how the negotiations really work who are the key players and how to engage with those players The authors reveal how stakeholders can be effective from the very first day of their first UN meeting Drawing on interviews with other experts as well as training materials that have been produced by the authors this book demystifies what to many outsiders can seem like an opaque and confusing world This book is an essential resource for individuals and organisations entering the world of the United Nations for the first time as well as those looking to gain a deeper understanding of how the world of international diplomacy really works      **Local Government Quarterly** ,2007      *Global Environmental Politics* Pamela S. Chasek,David L. Downie,Janet Welsh Brown,2006-01-03 Rev ed of Global environmental politics Gareth Porter Janet Welsh Brown and Pamela S Chasek 3rd ed 2000      **Choice** ,2006      *Climate Change and Energy Insecurity* Felix Dodds,Andrew Higham,Richard Sherman,2009-12-01 Climate change is now recognised as one of the greatest challenges facing the international community

and when coupled with energy production and use the most significant contributor to climate change and the related security problems the double threat to international security and human development is of the highest order This wide ranging book brings together leading thinkers from academia government and civil society to examine and address the global insecurity and development challenges arising from the twin thrust of climate change and the energy supply crunch Part one considers energy It analyses the challenges of meeting future energy demands and the ongoing and future security related conflicts over energy Coverage includes security and development concerns related to the oil and gas nuclear bio fuels and hydropower sectors ensuring energy access for all and addressing sustainable consumption and production in both developed and rapidly industrializing countries such as India China Brazil and South Africa Part two analyses how climate change contributes to global insecurity and presents a consolidated overview of the potential threats and challenges it poses to international peace and development Coverage includes future water scenarios including a focus on scarcity in the Middle East food security biodiversity loss land degradation the changing economics of climate change adaptation and the special case of small island states The final part lays out the potential avenues and mechanisms available to the international community to address and avert climate and energy instability via the multilateral framework under the United Nations It also addresses mechanisms for resource and knowledge transfer from industrialized to developing countries to ensure a low carbon energy transition by focusing on the rapid deployment of clean energy technologies and ways to tackle income and employment insecurity created by the transition away from traditional energy sources This book offers the most comprehensive international assessment of the challenges and solutions for tackling the global insecurity arising from climate change and energy provision and use It is essential reading for students researchers and professionals across international relations security climate change and the energy sectors      **American Book Publishing Record** ,2003
