*Earth* Frank H. T. Rhodes, 2012-06-10 It s impossible to grasp the whole planet or integrate all the descriptions of it But because we live here we have to try This is not just an artistic compulsion or an existential yearning still less an academic exercise It s a survival issue This is the only planet we have We re stuck here and we don t own the place it would be the height of arrogance to assume that we do We re tenants here not owners but we re tenants with hope for a long term tenancy We want to extend our lease just as far as we can from Earth A Tenant s Manual In *Earth A Tenant s Manual* the distinguished geologist Frank H T Rhodes President Emeritus of Cornell University provides a sweeping accessible and deeply informed guide to the home we all share showing us how we might best preserve the Earth s livability for ourselves and future generations Rhodes begins by setting the scene for our active planet and explaining how its location and composition determine how the Earth works and why it teems with life He emphasizes the changes that are of concern to us today from earthquakes to climate change and the clashes over the energy resources needed for the Earth s exploding population He concludes with an extended

exploration of humanity's prospects on a complex protean and ultimately finite world. It is not a question of whether the planet is sustainable; the challenge facing life on Earth and the life of the Earth is whether an expanding and high consumption species like ours is sustainable. Only new resources, new priorities, new policies, and most of all, new knowledge can reverse the damage that humanity is doing to our home and ourselves. A sustainable human future, Rhodes concludes in this eloquent, sobering but ultimately optimistic book, will require a sense of responsible stewardship for we are not owners of this planet; we are tenants. Surveying the systems large and small that govern Earth's processes and influence its changes, Rhodes addresses the negative consequences of human activities for the health of its regulatory systems but offers practical suggestions as to how we might effect repairs or at least limit further damage to our home.

*A Cultural History of Climate Change* Tom Bristow, Thomas Ford, 2016-04-20

Charting innovative directions in the environmental humanities, this book examines the cultural history of climate change under three broad headings: history, writing, and politics. Climate change compels us to rethink many of our traditional means of historical understanding and demands new ways of relating human knowledge, action, and representations to the dimensions of geological and evolutionary time. To address these challenges, this book positions our present moment of climatic knowledge within much longer histories of climatic experience. Only in light of these histories, it argues, can we properly understand what climate means today across an array of discursive domains, from politics, literature, and law to neighbourly conversation. Its chapters identify turning points and experiments in the construction of climates and of atmospheres of sensation. They examine how contemporary ecological thought has repoliticised the representation of nature and detail vital aspects of the history and prehistory of our climatic modernity. This ground-breaking text will be of great interest to researchers and postgraduate students in environmental history, environmental governance, history of ideas, and science, literature, and eco-criticism, political theory, cultural theory, as well as all general readers interested in climate change.
