Global Healthcare Issue	<ul style="list-style-type: none">• HIV continues to be a significant global health issue, having claimed more than 32 million lives so far. In 2018, 770,000 people died from HIV-related causes globally (World Health Organization, 2018). By the end of 2018, approximately 37.9 million people were living with HIV, and 1.7 million becoming newly infected globally.• There is still no cure for HIV, and many people living with HIV or at risk for HIV infection do not have access to prevention, treatment, and care (Kaiser Family Foundation, 2019).
Description	<p>International efforts to combat HIV began in the first decade of the epidemic with the creation of the World Health Organization's (WHO) Global Program on AIDS in 1987. New initiatives and financing mechanisms have helped increase attention to HIV and contributed to efforts to achieve global goals; these include:</p> <ul style="list-style-type: none">• The Joint United Nations Program on HIV/AIDS (UNAIDS)• The Global Fund to Fight AIDS, Tuberculosis, and Malaria (Global Fund)• The Sustainable Development Goals (SDGs) (Kaiser Family Foundation, 2019). <p>"While we continue to make significant progress in treatment and prevention with programs such as PEPFAR, there are still underlying risks to changing priorities and guidelines in dealing with the</p>

Global Healthcare Grid:

Radiology in Global Health Daniel J. Mollura, Matthew P. Lungren, 2014-07-02 The World Health Organization stated that approximately two thirds of the world's population lacks adequate access to medical imaging. The scarcity of imaging services in developing regions contributes to a widening disparity of health care and limits global public health programs that require imaging. Radiology is an important component of many global health programs including those that address tuberculosis, AIDS related disease, trauma, occupational and environmental exposures, breast cancer screening and maternal infant health care. There is a growing need for medical imaging in global health efforts and humanitarian outreach particularly as an increasing number of academic, government and non governmental organizations expand delivery of health care to disadvantaged people worldwide. To systematically deploy clinical imaging services to low resource settings requires contributions from a variety of disciplines such as clinical radiology, epidemiology, public health, finance, radiation physics, information technology, engineering and others. This book will review critical concepts for those interested in managing, establishing or participating in a medical imaging program for resource limited environments and diverse cross cultural contexts undergoing imaging technology adaptation.

Global Health for All Jean-Paul Gaudillière, Andrew McDowell, Claudia Lang, Claire Beaudevin, 2022-04-15 *Global Health for All* trains a critical lens on global health to share the stories that global health's practices and logics tell about 20th and 21st century configurations of science and power. An ethnography on multiple scales, the book focuses on global health's key epistemic and therapeutic practices like localization, measurement, triage, markets, technology, care and regulation. Its roving approach traverses policy centers, sites of intervention and innumerable spaces in between to consider what happens when globalized logics, circulations and actors work to imagine, modify and manage health. By resting in these in between places, *Global Health for All* simultaneously examines global health as a coherent system and as a dynamic, unpredictable collection of modular parts.
