

# AIR POLLUTION

90% of the world's population is affected by air pollution, leading to widespread health issues and environmental degradation.

Air pollution costs trillions of dollars each year in healthcare expenses and lost productivity.

Air pollution contributes to approximately ~9% of global deaths.

# 91%

of the world's population lives in areas with poor air quality.

Transportation contributes to 27% of global greenhouse gas emissions

Industrial activities account for 21% of global carbon dioxide emissions.

Agriculture produces 24% of methane emissions, a potent greenhouse gas.

Air Pollution Air Quality and Climate Change offers a review of the latest advances and developments in the study of air pollution and air quality in the face of continuing climate change The editors begin with a detailed review of air pollution and its sources effects and impacts In depth chapters follow on atmospheric chemistry air pollution meteorology and take a look at indoor and urban air quality The editors then explore the connection between air quality and climate change the effects of CO<sub>2</sub> on air quality and use of carbon capture and storage Finally the book closes with a discussion of environmental policy making as well as future considerations for air pollution air quality and climate change This text is a timely and valuable reference for anyone working towards solutions to reduce air pollution improve air quality and lessen the effects of climate change Helps readers understand atmospheric pollutants exposure assessment and material damage Explores the role of carbon dioxide in air pollution and its effect on air quality Provides innovative approaches new technologies and strategies to reduce air pollution and improve air quality      [The Invisible Killer](#) Gary Fuller,2019-03-19

An urgent examination of one of the biggest global crises facing us today the drastic worsening of air pollution and what we can do about it The air pollution that we breathe every day is largely invisible but it is killing us How did it get this bad and how can we stop it Far from a modern day problem scientists were aware of the impact of air pollution as far back as the seventeenth century Now as more of us live in cities we are closer than ever to pollution sources and the detrimental impact on the environment and our health has reached crisis point The Invisible Killer will introduce you to the incredible individuals whose groundbreaking research paved the way to today's understanding of air pollution often at their own detriment Gary Fuller's global story examines devastating incidents from London's Great Smog to Norway's acid rain Los Angeles traffic problem to wood burning damage in New Zealand Fuller argues that the only way to alter the future course of our planet and improve collective global health is for city and national governments to stop ignoring evidence and take action persuading the public and making polluters bear the full cost of the harm that they do The decisions that we make today will impact on our health for decades to come The Invisible Killer is an essential book for our times and a cautionary tale we need to take heed of      **Atmospheric Pollution and Environmental Change** Sarah Metcalfe,Dick Derwent,2014-05-01

arguably the world's most urgent problem. Solving this problem is proving difficult and complex as it involves joint efforts by governments, companies, communities, and innovators. The increased use of fossil fuels associated with global economic growths has led to rising GHG emissions and global warming. There are many challenges for countries that are enacting new climate and clean energy regulations in line with their Paris Agreement commitments. Good government policies and corporate strategies are essential to support these efforts as part of the global climate change crisis. This important book addresses the latest climate change impacts and developments in potential mitigation strategies. These include fossil to clean energy transition, smart low carbon city designs, green transportation, electric vehicles, green agriculture, carbon emission trading, carbon capture solutions, plus climate finance and risk management. Potential new policies and strategies to support the successful implementation of these important strategic areas are discussed together with high level country and business case examples. This book is essential reading for policy makers, government employees, business executives, professionals, researchers, and academics alike looking to affect change to global climate and energy policies.
