Glucagon Physiology Pathophysiology And Morphology Of The Pancreatic A Cells:

Glucagon, Physiology, Pathophysiology, and Morphology of the Pancreatic A-cells Roger H. Unger, Lelio Orci, 1981 **Glucagon II**, 2012-12-06 *Glucagon I*, 2012-12-06 The Editorial Board of the Handbook of Experimental Pharmacology apparently did not hurry in suggesting production of a volume on glucagon since the present opus is number sixty six in the series This fact is even more striking if we consider that 34 volumes published over about eight years will separate the books on glucagon from those on insulin on library shelves whereas only a few microns separate the cells manufacturing these two polypeptides within the islets of Langerhans in the pancreas Numerous factors have probably caused this discrimination four of them are First insulin deficiency or resistance is the cause of one of the most serious and distressing diseases diabetes mellitus which affects millions of people whereas glucagon deficiency is apparently an extremely rare disorder for which detailed reports are published of individual cases whenever they occur Second since its discovery in 1921 by BANTING and BEST insulin has been irreplaceable for the treatment of the most severe forms of diabetes whereas in contrast glucagon was until recently considered a relatively minor therapeutic agent Third whereas insulin is a compound which has been well characterized since the pioneering work of SANGER and its biosynthesis clearly identified by STEINER and his co workers glucagon also well characterized chemically has suffered from its parenthood with the so called glucagon like immunoreactive substances an incompletely defined series of immunologically related polypeptides present in the gut the pancreas and some other parts of the body *Somatostatin* Yogesh C. Patel, 2013-11-21 Montreal has had a longstanding interest in somatostatin Two years ago when the final planning began for the International Congress of Endocrinology in Quebec City in July 1984 we seized the opportunity for having a separate Satellite Symposium on somatostatin here in Montreal We felt that after a decade of uniformly vigorous growth in somatostatin research the opportune moment had arrived for a review of the most significant past developments and for setting the directions for the future Knowing the futility of trying to cover every aspect of the burgeoning somatostatin field in a two day scientific program we opted for a detailed analysis of selected areas which were reasonably mature and of areas of greatest new activity To attain these objectives 27 leading international experts actively involved in their fields were invited to present an indepth review of their work in one of five major categories of somatostatin research Thirty minutes at the end of each session were assigned for a three way comprehensive discussion of some of the core concepts between the session moderators the panellists and the audience The feedback that we have received from the participants leaves little doubt that the meeting was a scientific and social success This book fulfills our final commitment towards the Meeting which was to record the proceedings in a timely publication Neuropeptides Fleur L. Strand, 1999 This textbook is the first to bring together and synthesize the neuropeptide research of the past decade in such a comprehensive scholarly manner In recent years there has been increasing interest and subsequently active research in neuropeptides These neuroactive molecules

coordinate integrate and regulate physiological processes in all organisms throughout all phases of development Acting as neurohormones neurotransmitters and or neuromodulators they maintain physiological homeostasis and influence important behavioral patterns This textbook is the first to bring together and synthesize the neuropeptide research of the past decade in such a comprehensive scholarly manner The book is divided into two parts In Part I the author defines the basic principles of neuropeptide action including their biosynthesis processing transport distribution and interactions with receptors and second messenger systems Strand also discusses the intimate interaction between the neuropeptides stress and the immune system In Part II she discusses the regulatory functions of the families of neuropeptide in sufficient detail to provide both the advanced student and senior investigator with a thorough understanding of the most important neuropeptides The text also contains a complete and up to date reference reading list
