Science of Olfaction Michael J. Serby, Karen L. Chobor, 2012-12-06 A book such as this one necessarily entails the effort of many individuals Its first seed was a workshop in 1988 that one of us K L C designed and directed at the City University of New York Graduate Center as part of a series of conferences and workshops on topics in neuropsychology sponsored by the Institute for Research in Behavioral Neuroscience IRBN At that time studies in the efficacy of olfaction as an alternative modality of stimulation in brain injured adults were taking place at IRBN The work shop helped to spark many new ideas among IRBN s staff leading to various projects in clinical intervention some of which are discussed in this volume We soon discovered that clinical interest in olfaction was steadily increasing and that this modality was in many ways on a par with the rest Along with progress in the clinical investigation of olfaction an

abundance of work has been published in the basic science of the field Ideas such as the regeneration of olfactory neurons and the use of these neurons in trans plantation took hold and were proved to be viable ones These develop ments along with a profusion of techniques that allow a closer look at the anatomy and physiology of olfaction have contributed to the accelerated pace with which this field is now advancing Dr Biological Adhesive Systems Janek Byern,Ingo Grunwald,2011-01-27 J Herbert Waite Like many graduate students before and after me I was There are so many species about which nothing is known mesmerized by a proposition expressed years earlier by and the curse of not knowing is apathy Krogh 1929 namely that for many problems there is Bioadhesion is the adaptation featured in this book an animal on which it can be most conveniently studied and biology has many adhesive practitioners Indeed This opinion became known as the August Krogh Prin every living organism is adhesively assembled in the ciple and remains much discussed to this day particu most exquisite way Clearly speci c adhesion needs to larly among comparative physiologists Krebs 1975 be distinguished from the opportunistic variety I think The words problems and animal are key because of speci c adhesion as the adhesion between cells in the they highlight the two fundamental and complementary same tissue whereas opportunistic adhesion might be the foci of biological research 1 expertise about an animal adhesion between pathogenic microbes and the urinary zoo centric which is mostly observational and 2 a tract or between a slug and the garden path If oppor mechanistic analysis of some problem in the animal s life nistic bioadhesion is our theme then there are still many history or physiology problem centric which is usually practitioners but the subset is somewhat more select than a hypothesis driven investigation before
