Graphene-based Nanocomposite Sensors Sarat Kumar Swain, Swapnita Patra, 2023-10-13 Sensors are significantly relevant to many aspects of life The advancements in nanotechnology based sensing systems are giving rise to exciting developments in sensor applications Recently nanocomposites have become highly promising candidates for the designing of new chemical sensing and biosensing platforms Graphene based nanocomposites have been successfully employed in many sensing applications in view of their excellent physical properties including high surface area electrical conductivity flexibility and optical transparency They provide remarkable advantages such as lower fabrication costs improved biocompatibility prominent sensitivity stability and selectivity for effective real world implementation The aim of the book is to give an overview on the properties and novel applications of graphene based nanocomposites as chemical and biosensors Chapters highlight various biosensing applications such as diabetes monitoring cancer cell detection virus bacteria DNA protein and amino acid sensing as well as hormone and cholesterol detection Moreover chemical sensing applications like gas alcohol and food toxin sensing heavy metal ion detection and H₂O₂ sensing are also covered The book is ideal for postgraduates analytical chemists biomedical scientists and researchers in both academic and industrial settings working on materials science chemical science and nanotechnology

The Application of Bioactive Materials in Bone Repair Hu Yan, Rui Zhou, Qiuyue Peng, Yori Endo, Chenchen Yan, 2025-03-04 Biological activity in the field of materials mainly refers to the properties that can induce special biological and chemical reactions at the interface between materials and biological tissues forming chemical bonds between materials and biological tissues A bioactive material is a biomaterial that is able to participate in a regenerative process at the molecular level and dictate molecular and cellular events in a preferred and predictable way In the process of biomineralization the ability of biological material to chemically bond with living bone is an important index of the biomaterial and the biological activity of the material in vivo is reflected by the simulated body fluid SBF ability of apatite formed on the surface of the material In the field of bone repair bioactive materials such as hydrogels agglomerates and magnetic nanoparticles are playing an increasingly important role Compared with traditional bone repair materials bioactive materials have many advantages such as high biocompatibility simulation of the extracellular environment and easy engineering modification In addition as a delivery system bioactive materials are modified and engineered to be minimally invasive targeted and sustainably released The above characteristics have important application value in the field of bone repair This Research Topic aims to promote the use of bioactive materials in bone repair and recruit bioactive materials at the forefront of bone repair research Here we discuss the properties and characterization of different kinds of bioactive materials These materials mainly include 1 bioactive materials for the molecular mechanism of bone repair 2 bioactive

materials for targeted drug delivery systems 3 bioactive materials for injection or microneedles The establishment of this Research Topic hopes to further promote the interdisciplinary interaction between medicine and industry as well as to promote the clinical transformation and application of new biological materials In this Research Topic we welcome researchers to submit perspectives original articles reviews comments case reports and letters on the topic including but not limited to the following topics new ways of preparing materials related to bone repair advanced research on characterization detection and engineering modification of bioactive materials for bone repair research on bioactive materials for bone repair through molecular mechanisms research on bioactive materials for different interventions in bone repair to summarize the current status of the application of bioactive materials in bone repair **Popular Mechanics** ,1947-07 Popular Mechanics inspires instructs and influences readers to help them master the modern world Whether it s practical DIY home improvement tips gadgets and digital technology information on the newest cars or the latest breakthroughs in science PM is the ultimate guide to our high tech lifestyle
