Ehrmann, 2023-07-03 Whether they recognize it or not virtually all colleges and universities face three Grand Challenges Improve the learning outcomes of a higher education A large majority of college graduates are weak in capabilities that faculty and employers both see as crucial Extend more equitable access to degrees Too often students from underserved groups and poor households either don t enter college or else drop out without a degree The latter group may be worse off economically than if they d never attempted college Make academic programs more affordable in money and time for students and other important stakeholder groups Many potential students believe they lack the money or time needed for academic success Many faculty believe they don t have time to make their courses and degree programs more effective Many institutions believe they can t afford to improve outcomes These challenges are global But in a higher education system such as that in the United States the primary response must be institutional This book analyzes how over the years six pioneering colleges and universities have begun to make visible cumulative progress on all three fronts      **Quality Control** Carol

Krismann,1990      **China's New Normal, Supply-side, and Structural Reform** Cai Fang,2021-11-29 China's continuous rapid economic growth since the Reform and Opening up of the country in the early 1980s has been praised as a miracle of the world economy. However, since 2012 the rate of growth has slowed down, rendering some people pessimistic about the country's economic prospects. This title is a collection of a leading Chinese economist's views on China's economic growth and structural reform. The author argues that China's economy has entered the 'new normal', meaning that the slowed growth rate is not a cyclical phenomenon but a change in the stage of economic development. Therefore, there is a need to enact supply-side structural reforms such as improved efficiency of resource reallocation while shifting the mode of development from one of inputs to innovation. In addition, the author discusses the five major concepts of development proposed for the 13th Five Year Plan, as well as some critical topics related to supply-side structural reform, such as agricultural development, labor employment, and product quality. Scholars and students of macroeconomics, development economics, and the Chinese economy will find this book to be essential reading.      *Southern Economic Journal*, 1997      The Quality of the Educational Process in the United States and in Europe William Setchel Learned, 1927      *Sustainability in Action* Jörg Köhn, John M. Gowdy, Jan van der Straaten, 2001 Sustainability is a process that demands cooperation rather than competition. Sustainability in Action offers a variety of case studies that show how industry managers, policy decision makers, regional planners, and stakeholders cope with the sustainability concept and what it means to them. Although any decision is made in very specific environments, some general guidelines, methods, and tools are available to link business with sustainability. The distinguished authors, from a rich diversity of backgrounds, present case studies from their own unique perspectives of the concept of sustainability. Each chapter contains several different approaches to its subject, and these can include possibly technical and ethical views, the application of physical indicators or social parameters, and even a holistic view. The case studies show that no universal framework for sustainability exists and that any process or conflict has unique features requiring specific answers. With its multi-faceted approach to applying sustainability to industry planning and science, the readership of this book will extend into the fields of environment, economics, and sociology, as well as those in government and policy making.      *Challenge Magazine* New York University.
