Handbook of Power Systems II Steffen Rebennack, Panos M. Pardalos, Mario V. F. Pereira, Niko A. Iliadis, 2010-08-26

Energy is one of the world's most challenging problems and power systems are an important aspect of energy related issues. This handbook contains state of the art contributions on power systems modeling and optimization. The book is separated into two volumes with six sections which cover the most important areas of energy systems. The first volume covers the topics operations planning and expansion planning while the second volume focuses on transmission and distribution modeling forecasting in energy energy auctions and markets as well as risk management. The contributions are authored by recognized specialists in their fields and consist in either state of the art reviews or examinations of state of the art developments. The articles are not purely theoretical but instead also discuss specific applications in power systems.
