Lazaro, Bhagirath Singh Chauhan, 2021-11-03 *Zoo Conservation Biology* John E. Fa, Stephan M. Funk, Donnamarie O'Connell, 2011-08-18 In the face of ever declining biodiversity zoos have a major role to play in species conservation Written by professionals involved in in situ conservation and restoration projects internationally this is a critical assessment of the contribution of zoos to species conservation through evidence amassed from a wide range of sources The first part outlines the biodiversity context within which zoos should operate introducing the origins and global spread of zoos and exploring animal collection composition The second part focuses on the basic elements of keeping viable captive animal populations It considers the consequences of captivity on animals the genetics of captive populations and the performance of zoos in captive breeding The final part examines ways in which zoos can make a significant difference to conservation now and in the future Bridging the gap between pure science and applied conservation this is an ideal resource for both conservation biologists and zoo professionals **Introduction to Ecological Biochemistry** J. B. Harborne, 2014-06-28 Ecological biochemistry concerns the biochemistry of interactions between animals plants and the environment and includes such diverse subjects as plant adaptations to soil pollutants and the effects of plant toxins on herbivores The intriguing dependence of the Monarch butterfly on its host plants is chosen as an example of plant animal coevolution in action The ability to isolate trace amounts of a substance from plant tissues has led to a wealth of new research and the fourth edition of this well known text has consequently been extensively revised New sections have been provided on the cost of chemical defence and on the release of predator attracting volatiles from plants New information has been included on cyanogenesis the protective role of tannins in plants and the phenomenon of induced defence in plant leaves following herbivory Advanced level students and research workers alike will find much of value in this comprehensive text written by an acknowledged expert on this fascinating subject The book covers the biochemistry of interactions between animals plants and the environment and includes such diverse subjects as plant adaptations to soil pollutants and the effects of plant toxins on herbivores The intriguing dependence of the Monarch butterfly on its host plants is chosen as an example of plant animal coevolution in action New sections have been added on the cost of chemical defence and on the release of predators attracting volatiles from plants New information has been included on cyanogenesis the protective role of tannins in plants and the phenomenon of induced defence in plant leaves following herbivory *Annual Catalogue* United States Air Force Academy, 1985 *Undergraduate Catalog* University of Michigan--Dearborn, 2013 *Ecological Time Series* Thomas M. Powell, John H. Steele, 1994-12-31 This pioneering volume explores time series analysis and interpretation using a wide range of methods and examples from terrestrial marine and freshwater ecology The book challenges readers to discern interdisciplinary processes that can unify fields as diverse as climatology and epidemiology The first section of the book

explores the basic concepts of environmental analysis reviews state of the art techniques and methodologies and offers innovative solutions to analytical problems of longer time series with special attention to climate change providing the reader with the conceptual and methodological tools to analyze environmental data accurately The second section examines a variety of time scales used to describe change and the variability within and between different ecosystems so that diverse systems may be studied in an integrated way The final section of the book illustrates key concepts and themes based on the results of major investigations in various time scales including studies from arctic sites to human epidemiology Investigating time series in the context of ecological functions such as population processes community structure and patch dynamics this insightful volume will stimulate cross fertilization among the ecological disciplines The broad spectrum of ideas and applications examined in this volume makes it a useful resource for all ecologists **United States Air Force Academy**
