Ecology Firsts:

A History of the Ecosystem Concept in Ecology Frank B. Golley, 1993-01-01 The ecosystem concept the idea that flora and fauna interact with the environment to form an ecological complex has long been central to the public perception of ecology and to increasing awareness of environmental degradation In this book an eminent ecologist explains the ecosystem concept tracing its evolution describing how numerous American and European researchers contributed to its evolution and discussing the explosive growth of ecosystem studies Golley surveys the development of the ecosystem concept in the late nineteenth and early twentieth centuries and discusses the coining of the term ecosystem by the English ecologist Sir Arthur George Tansley in 1935 He then reviews how the American ecologist Raymond Lindeman applied the concept to a small lake in Minnesota and showed how the biota and the environment of the lake interacted through the exchange of energy Golley describes how a seminal textbook on ecology written by Eugene P Odum helped to popularize the ecosystem concept and how numerous other scientists investigated its principles and published their results He relates how ecosystem studies dominated ecology in the 1960s and became a key element of the International Biological Program biome studies in the United States a program aimed at the betterment of mankind specifically through conservation human genetics and improvements in the use of natural resources how a study of watershed ecosystems in Hubbard Brook New Hampshire blazed new paths in ecosystem research by defining the limits of the system in a natural way and how current research uses the ecosystem concept Throughout Golley shows how the ecosystem concept has been shaped internationally by both developments in other disciplines and by personalities and politics

A History of Ecology and Environmentalism in Spanish American Literature Scott M.

DeVries,2013-09-05 A History of Ecology and Environmentalism in Spanish American Literature undertakes a comprehensive ecocritical examination of the region's literature from the foundational texts of the nineteenth century to the most recent fiction The book begins with a consideration of the way in which Argentine Domingo Faustino Sarmiento's views of nature through the lens of the categories of civilization and barbarity from Facundo 1845 are systematically challenged and revised in the rest of the century Subsequently this book develops the argument that a vital part of the cultural critique and aesthetic innovations of Spanish American modernismo involve an ecological challenge to deepening discourses of untamed development from Europe and the United States In other chapters many of the well established titles of regional and indigenista literature are contrasted to counter traditions within those genres that express aspects of environmental justice deep ecology the relational role of emotion in nature protectionism and conservationism even the rights of non human nature Finally the concluding chapters find that the articulation of ecological advocacy in recent fiction is both more explicit than what came before but also impacts the formal elements of literature in unique ways Textual conventions such as language imagery focalization narrative sequence metafiction satire and parody represent innovations of form that proceed directly from the ethical advocacy of environmentalism The book concludes with comments about what must follow as a result of the analysis including the revision of canon the development of literary criticism from novel approaches such as critical animal studies and the advent of a critical dialogue within the bounds of Spanish American environmentalist literature A History of Ecology and Environmentalism in Spanish American Literature attempts to develop a sense of the way in which ecological ideas have developed over time in the literature particularly the way in which many Spanish American texts anticipate several of the ecological discourses that have recently become so central to global culture current environmentalist thought and the future of humankind

Proceedings of the Symposium on the Ecology, Management, and Utilization of California Oaks ,1981 *Evolutionary History* Edmund Russell,2011-04-11 We tend to see history and evolution springing from separate roots one grounded in the human world and the other in the natural world Human beings have however become probably the most powerful species shaping evolution today and human caused evolution in other species has probably been the most important force shaping human history This book introduces readers to evolutionary history a new field that unites history and biology to create a fuller understanding of the past than either can produce on its own Evolutionary history can stimulate surprising new hypotheses for any field of history and evolutionary biology How many art historians would have guessed that sculpture encouraged the evolution of tuskless elephants How many biologists would have predicted that human poverty would accelerate animal evolution How many military historians would have suspected that plant evolution would convert a counter insurgency strategy into a rebel subsidy With examples from around the globe this book will help readers see the broadest patterns of history and the details of their own life in a new light

Ecology Revisited Astrid Schwarz, Kurt Jax, 2011-03-18 As concerns about humankind's relationship with the environment move inexorably up the agenda this volume tells the story of the history of the concept of ecology itself and adds much to the historical and philosophical debate over this multifaceted discipline The text provides readers with an overview of the theoretical institutional and historical formation of ecological knowledge The varied local conditions of early ecology are considered in detail while epistemological problems that lie on the borders of ecology such as disunity and complexity are discussed The book traces the various phases of the history of the concept of ecology itself from its 19th century origins and antecedents through the emergence of the environmental movement in the later 20th century to the future and how ecology might be located in the environmental science framework of the 21st century The study of ecological phenomena has never been confined solely to the work of researchers who consider themselves ecologists It is rather a field of knowledge in which a plurality of practices concepts and theories are developed Thus there exist numerous disciplinary subdivisions and research

programmes within the field the boundaries of which remain blurred As a consequence the deliberation to adequately identify the ecological field of knowledge its epistemic and institutional setting is still going on This will be of central importance not only in locating ecology in the frame of 21st century environmental sciences but also for a better understanding of how nature and culture are intertwined in debates about pressing problems such as climate change the protection of species diversity or the management of renewable resources
