Econometric Modeling In Economic Education Research:

Econometric Modeling in Economic Education Research William E. Becker Jr., Rolf A. Walstad, 2012-12-06 Since its establishment in the 1950s the American Economic Association's Committee on Economic Education has sought to promote improved instruction in economics and to facilitate this objective by stimulating research on the teaching of economics. These efforts are most apparent in the sessions on economic education that the Committee organizes at the Association's annual meetings. At these sessions economists interested in economic education have opportunities to present new ideas on teaching and research and also to report the findings of their research. The record of this activity can be found in the Proceedings of the American Economic Review. The Committee on Economic Education and its members have been actively involved in a variety of other projects. In the early 1960s it organized the National Task Force on Economic Education that spurred the development of economics teaching at the precollege level. This in turn led to the development of a standardized research instrument, a high school test of economic understanding. This was followed later in the 1960s by the preparation of a similar test of understanding college economics. The development of these two instruments greatly facilitated research on the impact of economics instruction, opened the way for application of increasingly sophisticated statistical methods in measuring the impact of economic education, and initiated a steady stream of research papers on a subject that previously had not been explored.

An International Perspective on Economic Education William B. Walstad, 2012-12-06 Economics is taught in some form in the secondary schools of nations throughout the world. The subject is rarely taught in elementary schools, and while economics courses are offered in universities, the majority of students end their formal education with secondary school. Thus the best opportunity for the economic education of the youth of a nation occurs in secondary schools. This book examines economic education at this critical level of the educational system. The teaching of economics in secondary schools varies across countries. These differences occur because of history, the structure of education, and other national factors. At the same time, there are common elements in the economic education of many countries, especially in content coverage. This contrast between the common features and the uniqueness of economic education in secondary schools of major industrial nations exemplifies the international perspective presented in this book. The international perspective is developed in the six sections of the volume. The first section discusses why nations should include economics in school curricula and presents a framework for teaching economics that should have global appeal. Dissension and consensus on economic issues among North American and European economists are examined in the second section. The third section surveys the U.S. research literature on precollege economic education and assesses the current state of economics instruction in U.S. schools. The economics curricula and educational practices in seven other nations—the U.K., Canada, Japan, Germany, Austria, Korea, and Australia—are described in the fourth and fifth sections. The fifth section also presents international comparisons of economic understanding based on national testing in six of those nations. The sixth and final section explores the role of economic

education in centrally planned economies and its effects on the transition to a market economy using Russia Bulgaria and China as case studies

Higher Education and Economic Growth William E. Becker Jr., D.R. Lewis, 2013-03-09 After decades of effortless growth and prosperity America's postsecondary institutions of education have come under increasing financial stress and waning public support In part this stress reflects a slowdown in the real rate of national economic growth and the loss of federal and state revenues for education generally It also reflects a trend of state legislatures simply giving higher education an ever lower ranking on the list of funding priorities Postsecondary educational institutions in the United States will continue to face increasing financial stress and waning public support as critics question the contribution of higher education to economic growth which historically has been a major rationale for funding Unless the trends in education financing can be changed higher education can be expected to stagnate What if anything can be done As a starting point advocates of higher education need to more fully recognize the important ways in which higher education influences technological change and also is influenced by that change As demonstrated by the chapters in this book higher education is not a neutral or passive player in economic growth This volume addresses topics related to the role of postsecondary education in national economic development within the United States

The Economics of American Higher Education William E. Becker Jr., D.R. Lewis, 2012-12-06 Postsecondary educational institutions in the United States are facing increasing financial stress and waning public support Unless these trends can be changed higher education can be expected to stagnate What if anything can be done As a starting point advocates of higher education need to more fully recognize the issues associated with the economic mission of higher education and how this mission gets translated into individual student gains regional growth and social equity This requires an understanding of the relationship between the outcomes of higher education and measures of economic productivity and well being This volume addresses topics related to the role of postsecondary education in microeconomic development within the United States Attention is given to the importance of colleges and universities in the enhancement of individual students and in the advancement of the communities and states within which they work Although several of the chapters in this

volume are aimed at research teaching universities much of what is presented throughout can be generalized to all of postsecondary education Little attention however is given to the role of higher education in the macroeconomic development of the United States this topic is covered in our related book American Higher Education and National Growth **Higher Education: Handbook of Theory and Research** J.C. Measuring Water Quality Benefits V. Kerry Smith,William H. Desvousges,2012-12-06 Almost 5 years ago we began working together on research for the U S Environmental Protection Agency EPA to measure the benefits of water quality regulations EPA had awarded a contract to Research Triangle Institute RTI in response to a proposal that Bill wrote on measuring these benefits After meeting with the EPA project officer Dr Ann Fisher the basic outlines of what would become this research were framed Upon the suggestion of Bob Anderson then chief of the Benefits Branch at EPA we selected the Monongahela River as the focal point of a case study that would compare alternative benefit measurement approaches

Exactly how this case study would be done remained vague but Ann urged that there be a survey and that nonuse benefits be included in the question naire design Of course Bill agreed At the same time Kerry was independently working on a review article that tied together some of the loose threads in the option value literature He had also been thinking about how to measure option value as well as working on ways to generalize the travel cost approach for estimating benefits of site attributes Glenn Morris at RTI suggested that Bill have lunch with him and Kerry and that they could talk about Bill s research to see if there were any mutual interest Over the lunch and Bill s ever present dessert in a Chapel Hill restaurant we found out just how much we have in common
