Electronic Health Information Privacy And Security Compliance Under Hipaa:

Electronic Health Information John R. Christiansen, 2000 **Healthcare Information Privacy and Security** Bernard Peter Robichau, 2014-06-23 Healthcare IT is the growth industry right now and the need for guidance in regard to privacy and security is huge. With new federal incentives and penalties tied to the HITECH Act, HIPAA and the implementation of Electronic Health Record (EHR) systems, medical practices and healthcare systems are implementing new software at breakneck speed. Yet privacy and security considerations are often an afterthought, putting healthcare organizations at risk of fines and damage to their reputations. *Healthcare Information Privacy and Security: Regulatory Compliance and Data Security in the Age of Electronic Health Records* outlines the new regulatory regime and it also provides IT professionals with the processes and protocols, standards and governance tools they need to maintain a secure and legal environment for data and records. It is a concrete resource that will help you understand the issues affecting the law and regulatory compliance, privacy and security in the enterprise. As healthcare IT security expert Bernard Peter Robichau II shows, the success of a privacy and security initiative lies not just in proper planning but also in identifying who will own the implementation and maintain technologies and processes. From executive sponsors to system analysts and administrators, a properly designed security program requires that the right people are assigned to the right tasks and have the tools they need. Robichau explains how to design and implement that program with an eye toward long term success. Putting processes and systems in place is of course only the start. Robichau also shows how to manage your security program and maintain operational support, including ongoing maintenance and policy updates. Because regulations never sleep, this book will help you devise solutions that include identity and access management systems, proper application design, physical and environmental safeguards, systemwide and client-based security configurations, safeguards for patient data, training and auditing procedures, governance and policy administration. *Healthcare Information Privacy and Security* is the definitive guide to help you through the process of maintaining privacy and security in the healthcare industry. It will help you keep health information safe and it will help keep your organization, whether local clinic or major hospital system, on the right side of the law. **Electronic Healthcare Information Security** Charles A. Shoniregun, Kudakwashe Dube, Fredrick Mtenzi, 2010-11-03 The adoption of Information and Communication Technologies (ICT) in healthcare is driven by the need to contain costs while maximizing quality and efficiency. However, ICT adoption for healthcare information management has brought far-reaching effects and implications on the spirit of the Hippocratic Oath, patient privacy and confidentiality. A wave of security breaches have led to pressing calls for opt-in and opt-out provisions where patients are free to choose to or not have their healthcare information collected and recorded within healthcare information systems. Such provisions have negative impact on cost efficiency and quality of patient care. Thus, determined efforts to gain patient trust is increasingly under consideration for enforcement through legislation, standards, national policy frameworks and implementation systems geared towards closing gaps in ICT.

security frameworks The ever increasing healthcare expenditure and pressing demand for improved quality and efficiency in patient care services are driving innovation in healthcare information management Key among the main innovations is the introduction of new healthcare practice concepts such as shared care evidence based medicine clinical practice guidelines and protocols the cradle to grave health record and clinical workflow or careflow Central to these organizational re engineering innovations is the widespread adoption of Information and Communication Technologies ICT at national and regional levels which has ushered in computer based healthcare information management that is centred on the electronic healthcare record EHR
