Electroweak Effects at High Energies Harvey B. Newman, 2013-06-29 The first Europhysics Study Conference on Electroweak Effects at High Energies was held at the Ettore Majorana Centre for Scientific Culture in Erice Sicily from February 1-12 1983. The conference was attended by 61 physicists from 11 countries. The conference was sponsored by the European Physical Society, the Italian Ministry of Public Education, the Italian Ministry of Technological Research, the Sicilian Regional Government, and the California Institute of Technology. **CONFERENCE FORMAT** The Study Conference followed a new intensive format in which the state of our knowledge of the electroweak interaction and the relation of the electroweak sector to Grand Unified and Superunified Theories was reviewed in some depth. During the two week conference 54 experimental and theoretical talks were presented and four evening discussion sessions were held. The Erice surroundings, the wide ranging conference program, and the fact that nearly all of the participants were directly involved in recent major experimental or theoretical developments led to animated and very friendly discussions. Participants had the rare opportunity to view most of the major trends in high energy physics in a short interval of time and to discuss and contemplate the trends in the uniquely peaceful yet stimulating atmosphere which is an Erice tradition. **Electroweak Effects at High Energies**

High Energy Electron-positron Physics Ahmed Ali, Paul S. Ding, 1988 With the termination of the physics program at PETRA and with the start of TRISTAN and the SLC and later LEP, an era of e^+e^- physics has come to an end and a new one begins. The field is changing from a field of few specialists to becoming one of the mainstream efforts of the high energy community. It seems appropriate at this moment to summarize what has been learned over the past years in a way most useful to any high energy physicists, in particular to newcomers in the e^+e^- field. This is the purpose of the book. This book should be used as a reference for future workers in the field of e^+e^- interactions. It includes the

introduction to this technique It discusses the expansion of Feynman diagrams around the high energy limit followed by the explicit construction of the effective Lagrangian first for a scalar theory then for QCD The underlying concepts are illustrated with the quark vector form factor at large momentum transfer and the formalism is applied to compute soft gluon resummation and to perform transverse momentum resummation for the Drell Yan process utilizing renormalization group evolution in SCET Finally the infrared structure of n point gauge theory amplitudes is analyzed by relating them to effective theory operators This text is suitable for graduate students and non specialist researchers alike as it requires only basic knowledge of perturbative QCD **Scientific and Technical Aerospace Reports** ,1995 **Proceedings Of The 28th**
