Principles of Plant Biology for the Tropics Arthur Raymond Loveless,1983 Structure of the flowering plant Physiology of the flowering plant Physiology of the flowering plant The plant kingdom Ecology and genetics *Trophic Cascades* John Terborgh,James A Estes,2013-06-25 Trophic cascades the top down regulation of ecosystems by predators are an essential aspect of ecosystem function and well being Trophic cascades are often drastically disrupted by human interventions for

example when wolves and cougars are removed allowing deer and beaver to become destructive yet have only recently begun to be considered in the development of conservation and management strategies **Trophic Cascades** is the first comprehensive presentation of the science on this subject It brings together some of the world's leading scientists and researchers to explain the importance of large animals in regulating ecosystems and to relate that scientific knowledge to practical conservation Chapters examine trophic cascades across the world's major biomes including intertidal habitats coastal oceans lakes nearshore ecosystems open oceans tropical forests boreal and temperate ecosystems low arctic scrubland savannas and islands Additional chapters consider aboveground belowground linkages predation and ecosystem processes consumer control by megafauna and fire and alternative states in ecosystems An introductory chapter offers a concise overview of trophic cascades while concluding chapters consider theoretical perspectives and comparative issues **Trophic Cascades** provides a scientific basis and justification for the idea that large predators and top down forcing must be considered in conservation strategies alongside factors such as habitat preservation and invasive species It is a groundbreaking work for scientists and managers involved with biodiversity conservation and protection Primary Productivity of the Biosphere H. Lieth, R.H. Whittaker, 2012-12-06 The period since World War II and especially the last decade influenced by the International Biological Program has seen enormous growth in research on the function of ecosystems The same period has seen an exponential rise in environmental problems including the capacity of the Earth to support man's population The concern extends to man's effects on the biosphere the film of living organisms on the Earth's surface that supports man The common theme of ecologic research and environmental concerns is primary production the binding of sunlight energy into organic matter by plants that supports all life Many results from the IBP remain to be synthesized but enough data are available from that program and other research to develop a convincing summary of the primary production of the biosphere the purpose of this book The book had its origin in the parallel interests of the two editors and Gene E Likens which led them to prepare a symposium on the topic at the Second Biological Congress of the American Institute of Biological Sciences in Miami Florida October 24 1971 Revisions of the papers presented at that symposium appear as Chapters 2 8 9 10 and 15 in this book We have added other chapters that complement this core these include discussion and evaluation of methods for measuring productivity and regional production current findings on tropical productivity and models of primary productivity

Tropical Ecosystems and Ecological Concepts Patrick L. Osborne, 2012-02-09 Introductory textbook using the entire range of tropical ecosystems terrestrial freshwater and marine to illustrate and explain major ecological concepts

Land and Land Appraisal R.O. Whyte, 2012-12-06 This book is designed to present those principles and techniques for land appraisal which are applicable to all developing countries Examples of specific situations in which these techniques have been or might be adopted are taken primarily from monsoonal and equatorial Asia It is in this region that the land food population problem is most acute It is also the writer's region of specialization over the past ten years out of a total of some twenty five years working in or closely concerned with Asia an attempt has been made to examine the major problems of land potential in relation to rural economy and nutrition in the whole region and in particular to show to what extent its different parts resemble or differ from each other The geographical scope comprises mainland southern southeast

and east Asia from Pakistan to the People s Republic of China and Korea with the insular monsoonal and equatorial lands of Sri Lanka Indonesia East Malaysia Philippines Taiwan and Japan part International and bilateral agencies and specialists outside Asia repeatedly insist that Asia must learn to feed itself from the produce of its own land or from imported foods paid for by the exports of primary and secondary commodities and of manufactured products to the developed world *Natural Grasslands* R.T. Coupland,1993-02-01 This volume is concerned with those parts of the earth s surface where semiarid to subhumid climate determines that the potential vegetation is characterized by a more or less continuous layer of grasses and other associated herbs These grasslands have been modified to a very considerable degree by the activities of man and his domesticated animals The authors of the various chapters have evaluated the effect of these stresses in modifying ecosystem structure and activities of organisms The book provides an intensively referenced and indexed synthesis and review of knowledge concerning the natural grasslands of the world in as uniform a style as possible Because of its length it is published in two parts The first part deals with the grasslands of the Western Hemisphere and the Eastern Hemisphere and the resum compose this second volume Perspectives on Marine Environmental Change in Hong Kong and Southern China, 1977-2001 Brian Morton,2003-01-01 Here eminent marine scientists and local researchers who have attended the workshops express their views on the many changes in Hong Kong s surrounding waters
