Cultural Moves Herman Gray, 2005-02-14 Herman Gray takes a sweeping look at black popular culture over the past decade to explore culture's role in the push for black political power and social recognition In a series of linked essays he finds that black artists scholars musicians and others have been instrumental in reconfiguring social and cultural life in the United States and he provocatively asks how black culture can now move beyond a preoccupation with inclusion and representation Gray considers how Wynton Marsalis and his creation of a jazz canon at Lincoln Center acted to establish cultural visibility and legitimacy for jazz Other essays address such topics as the work of the controversial artist Kara Walker the relentless struggles for representation on network television when those networks are no longer the primary site of black or any other identity and how black musicians such as Steve Coleman and George Lewis are using new technology to shape and extend black musical traditions and cultural identities

interactive bodies transformed by shock gender and color An invaluable reference work in the field of visual media studies Transmedia Frictions provides sound historical perspective on the social and political aspects of the interactive digital arts demonstrating that they are never neutral or innocent Wired Shut Tarleton Gillespie, 2009-09-18 How the shift toward technical copy protection in the battle over digital copyright depends on changing political and commercial alignments that are profoundly shaping the future of cultural expression in a digital age While the public and the media have been distracted by the story of Napster warnings about the evils of piracy and lawsuits by the recording and film industries the enforcement of copyright law in the digital world has quietly shifted from regulating copying to regulating the design of technology Lawmakers and commercial interests are pursuing what might be called a technical fix instead of specifying what can and cannot be done legally with a copyrighted work this new approach calls for the strategic use of encryption technologies to build standards of copyright directly into digital devices so that some uses are possible and others rendered impossible In Wired Shut Tarleton Gillespie examines this shift to technical copy protection and its profound political economic and cultural implications Gillespie reveals that the real story is not the technological controls themselves but the political economic and cultural arrangements being put in place to make them work He shows that this approach to digital copyright depends on new kinds of alliances among content and technology industries legislators regulators and the courts and is changing the relationship between law and technology in the process The film and music industries he claims are deploying copyright in order to funnel digital culture into increasingly commercial patterns that threaten to undermine the democratic potential of a network society In this broad context Gillespie examines three recent controversies over digital copyright the failed effort to develop copy protection for portable music players with the Strategic Digital Music Initiative SDMI the encryption system used in DVDs and the film industry's legal response to the tools that challenged them and the attempt by the FCC to mandate the broadcast flag copy protection system for digital television In each he argues that whether or not such technical constraints ever succeed the political alignments required will profoundly shape the future of cultural expression in a digital age Affective Politics of Digital Media Megan Boler, Elizabeth Davis, 2020-09-02 This interdisciplinary international collection examines how sophisticated digital practices and technologies exploit and capitalize on emotions with particular focus on how social media are used to exacerbate social conflicts surrounding racism misogyny and nationalism Radically expanding the study of media and political communications this book bridges humanities and social sciences to explore affective information economies and how emotions are being weaponized within mediatized political landscapes The chapters cover a wide range of topics how clickbait fake news and right wing actors deploy and weaponize emotion new theoretical directions for understanding affect algorithms and public spheres and how the wedding of big data and behavioral science enables new frontiers of propaganda as seen in the Cambridge Analytica and Facebook scandal The collection includes original interviews with luminary media scholars and journalists The book features contributions from

established and emerging scholars of communications media studies affect theory journalism policy studies gender studies and critical race studies to address questions of concern to scholars journalists and students in these fields and beyond
