Elements Of Ethology:

Elements of Ethology D. Wood-Gush, 2012-12-06 The object of this book is to introduce ethology to agricultural and veterinary students Today ethology covers many approaches to the study of animal behaviour which are connected by one unifying concept all behaviour must be considered in relation to the ecology and evolutionary history of the species under investigation This may seem to some to put domesticated animals beyond the scope of classical ethology but while domestication has involved some behavioural changes we shall see that much of the behaviour of our species of farm livestock differs little from that of their putative ancestors It is assumed that students using this book will already have studied some physiology It is also assumed that they are essentially practically minded and with this factor in mind I have discussed behaviour in terms of its function introducing the principles of ethology within functional categories of behaviour In order to best illustrate these principles I have taken examples from a variety of species and not confined myself to farm livestock and domestic animals for fundamental ethological research with these species has been patchy However at the end of each chapter I have given a list of papers pertaining to farm livestock so that the principles of ethology can be seen in a more practical context and to develop this approach further I have also added some practical problems for discussion at the end of each chapter *Elements of Ethology* David Grainger Marcus Wood-Gush, 1983 Neuroethology J.-P.

Ewert, 2012-12-06 Historically the search for the neural bases of behavior goes back a long way Neuroethology which is concerned with the experimental analysis of the releasing and control mechanisms of behavior is a young discipline Results from this multidisciplinary branch of research which uses physical chemical and mathematical methods have not yet been extensively treated in textbooks of neurophysiology and ethology This book is intended as a first attempt to pose major questions of neuroethology and to demonstrate by means of selected research examples some of the ways by which these questions are being approached Inevitably this cannot be a complete and in depth detailed treatment of all of the neurobiology examples and I realize that such a selection is of a subjective nature The overall goal of the book is to present an introduction After outlining some of the very basic neurophysiological and ethological concepts Chaps 2 and 3 neuroethological questions and methods are demonstrated extensively by means of a particular example Chap 4 There are two reasons to choose the visually guided prey catching and avoidance behavior of the Common Toad 1 it is a system which I have investigated for about fifteen years and therefore know best 2 the toad story is one of the most comprehensive neuro ethological approaches so far Thus it is possible here to outline the major concepts of neuroethology and to pose the basic questions **Aims and Methods in Neuroethology** David Maltby Guthrie, 1987 Perspectives in Ethology N.S.

Adriaens, Andreas De Block, 2011-03-10 Ever since Darwin psychiatrists have been tempted to put evolutionary theory to use in their efforts to understand and explain mental disorders Varying in success scope and scientific rigour these attempts have often caught the attention of philosophers There are many studies about how the philosophy of psychiatry has been informed by twentieth century continental philosophy in focusing on topics such as embodiment narrativity and gender as well as analytic philosophy in focusing on more conceptual issues Thus far however there are simply no studies about how philosophical issues in psychiatric theory and practice can be and have been informed by evolutionary theory *Maladapting Minds* explores the relationship between evolutionary theory and philosophy of psychiatry In particular it discusses a number of reasons why philosophers of psychiatry should take an interest in evolutionary explanations of mental disorders and more generally in evolutionary thinking The many chapters deal with

evolutionary accounts of various mental disorders including phobias fetishism developmental disorders depression autism spectrum disorders and schizophrenia Written by both world class philosophers psychologists and evolutionary psychiatrists this volume illustrates that many debates in contemporary philosophy of psychiatry are profoundly influenced by evolutionary approaches to mental disorders In doing so it represents the very first attempts to critically explore the interface between evolutionary theory and philosophy of psychiatry It is important reading for psychiatrists philosophers of mind and evolutionary psychologists
