**Dependability for Systems**

**with a Partitioned State Space** Attila Csenki, 2012-12-06 Probabilistic models of technical systems are studied here whose finite state space is partitioned into two or more subsets The systems considered are such that each of those subsets of the state space will correspond to a certain performance level of the system The crudest approach differentiates between working and failed system states only Another more sophisticated approach will differentiate between the various levels of redundancy provided by the system The dependability characteristics examined here are random variables associated with the state space's partitioned structure some typical ones are as follows The sequence of the lengths of the system's working periods The sequences of the times spent by the system at the various performance levels The cumulative time spent by the system in the set of working states during the first  $m$  working periods The total cumulative up time of the system until final breakdown The number of repair events during a finite time interval The number of repair events until final system breakdown Any combination of the above These dependability characteristics will be discussed within the Markov and semi Markov frameworks

**Engineering Mathematics II** Sergei Silvestrov, Milica Rančić, 2017-02-10 This book highlights the latest advances in engineering mathematics with a main focus on the mathematical models structures concepts problems and computational methods and algorithms most relevant for applications in modern technologies and engineering It addresses mathematical methods of algebra applied matrix analysis operator analysis probability theory and stochastic processes geometry and computational methods in network analysis data classification ranking and optimisation The individual chapters cover both theory and applications and include a wealth of figures schemes algorithms tables and results of data analysis and simulation Presenting new methods and results reviews of cutting edge research and open problems for future research they equip readers to develop new mathematical methods and concepts of their own and to further compare and analyse the methods and results discussed The book consists of contributed chapters covering research developed as a result of a focused international seminar series on mathematics and applied mathematics and a series of three focused international research workshops on engineering mathematics organised by the Research Environment in Mathematics and Applied Mathematics at Mälardalen University from autumn 2014 to autumn 2015 the International Workshop on Engineering Mathematics for Electromagnetics and Health Technology the International Workshop on Engineering Mathematics Algebra Analysis and Electromagnetics and the 1st Swedish Estonian International Workshop on Engineering Mathematics Algebra Analysis and Applications It serves as a source of inspiration for a broad spectrum of researchers and research students in applied mathematics as well as in the areas of applications of mathematics considered in the book
