Formal Methods For Interactive Systems:

Formal Methods for Interactive Systems Alan Dix, 1991 This essential book addresses the problems governing the usability of computer interfaces These problems are approached from the angle of the mathematical modeling of interactive systems By modeling various facets of the system such as windows real time phenomena and dynamic pointers the book demonstrates how formal methods of software engineering particularly functional programming can be used to enhance the efficiency and usability of interactive systems This book will be accessible and invaluable to researchers and students in the fields of HCI and formal methods for software engineering Employs a novel approach to HCI in using formal methods for evaluation and design Brings mathematical rigor to interface modeling Provides formalisms for the design of safety critical systems Outlines abstract models of interaction

2nd International Workshop on Formal Methods for Interactive Systems Antonio Cerone, Paul Curzon, David Duce, 2009 **Interactive Systems: Design, Specification, and Verification** Bodo Urban, Jean Vanderdonckt, Quentin Limbourg, 2003-07-01 This book constitutes the thoroughly refereed post proceedings of the 9th International Workshop on the Design Specification and Verification of Interactive Systems DSV IS 2002 held in Rostock Germany in June 2002 The 19 revised full papers presented have gone through two rounds of reviewing selection and improvement All aspects of the design specification and verification of interactive systems from the human computer interaction point of view are addressed Particular emphasis is given to models and their role in supporting the design and development of interactive systems and user interfaces for ubiquitous computing

Formal Methods in Human-Computer Interaction Philippe Palanque, Fabio Paterno, 2012-12-06 Formal methods have already been shown to improve the development process and quality assurance in system design and implementation This volume examines whether these benefits also apply to the field of human computer interface design and implementation and whether formal methods can offer useful support in usability evaluation and obtaining more reliable implementations of user requirements Its main

aim is to compare the different approaches and examine which particular type of implementation and problem each one is best suited to. To enable the reader to compare and contrast the approaches as easily as possible each one is applied to the same case study: the specification of an ideal Netscape like web browser and html page server. The resulting volume will provide invaluable reading for final year undergraduate and postgraduate courses on user interfaces, user interface design and applications of formal methods.

The wait for the year 2000 was marked by the fear of possible bugs that might have arisen at its beginning. One additional fear we had during this wait was whether organising this event would have generated a boon or another bug. The reasons for this fear originated in the awareness that the design of interactive systems is a fast moving area. The type of research work presented at this unique event has received limited support from funding agencies and industries making it more difficult to keep up with the rapid technological changes occurring in interaction technology. However despite our fear the workshop was successful because of the high quality level of participation and discussion. Before discussing such results let us step back and look at the evolution of DSV IS: Design Specification and Verification of Interactive Systems, an international workshop that has been organised every year since 1994. The first books that addressed this issue in a complete and thorough manner were the collection of contributions edited by Harrison and Thimbleby and the book written by Alan Dix which focused on abstractions useful to highlight important concepts in the design of interactive systems. Since then this area has attracted the interest of a wider number of research groups and some workshops on related topics started to be organised. DSV IS had its origins in this spreading and growing interest. The first workshop was held in a monastery located in the hills above Bocca di Magra, Italy.

Making systems easier to use implies increasingly complex management of communication between users and applications. An increasing part of the application program is devoted to the user interface. In order to manage this complexity it is very important to have tools, notations and methodologies that support the designer's work during the refinement process from specification to implementation. The purpose of this proceedings of the first 1994 Eurographics workshop on this area is to review the state of the art. It compares the different existing approaches in order to identify the principal requirements and the most suitable notations and methods and indicates the relevant results.

Design, Specification and Verification of Interactive Systems '95 Philippe Palanque, Remi Bastide, 2012-12-06

This book is the final outcome of the Eurographics Workshop on Design Specification and Verification of Interactive Systems that was held in Bonas from June 7 to 9 1995. This workshop was the second of its kind following the successful first edition in Italy in 1994. The goal of this ongoing series of meetings is to review the state of the art in the domain of tools, notations and methodologies supporting the design of Interactive Systems. This acknowledges the fact that making systems that are friendlier to the user makes the task ever harder to the designers of such systems and that much research is still needed to

provide the appropriate conceptual and practical tools The workshop was located in the Chateau de Bonas in the distant countryside of Toulouse France Tms location has been selected to preserve the quiet and studious atmosphere that was established in the monastery of Santa Croce at Bocca di Magra for the first edition and that was much enjoyed by the participants The conversations initiated during the sessions often lasted till late at night in the peaceful atmosphere of the Gers landscape

Interactive Systems. Design, Specification, and Verification T. C. Nicholas Graham,Philippe Palanque,2008-07-01 The modern world has made available a wealth of new possibilities for interacting with computers through advanced Web applications while on the go with handheld smart telephones or using electronic tabletops or wall sized displays Developers of modern interactive systems face great problems how to design applications which will work well with newly available technologies and how to efficiently and correctly implement such designs Design Specification and Verification of Interactive Systems 2008 was the 15th of a series of annual workshops devoted to helping designers and implementers of interactive systems unleash the power of modern interaction devices and techniques DSV IS 2008 was held at Queen s University in Kingston Canada during July 16 18 2008 This book collects the best papers submitted to the workshop There were 17 full papers 10 late breaking and experience report papers and two demonstrations Keynote presentations were provided by Judy Brown of Carleton University and Randy Ellis of Queen s University The first day of the workshop addressed the problems of user interface evaluation and specification with particular emphasis on the use of task models to provide hi level approaches for capturing the intended functionality of a user interface Day two continued this theme examining techniques for modeling user interfaces particularly for mobile and ubiquitous applications Presenters also discussed advanced implem tation techniques for interactive systems Finally day three considered how to arc tect interactive systems and returned to the themes of evaluation and specification

Design, Specification and Verification of Interactive Systems '98 Panos Markopoulos,Peter Johnson,2013-11-11 Does modelling formal or otherwise play a role in designing interactive systems A proliferation of interactive devices and technologies is used in an ever increasing diversity of contexts and combinations in professional and every day life This development poses a significant challenge to modelling approaches used for the design of interactive systems The papers in this volume discuss a range of modelling approaches the representations they use the strengths and weaknesses of their associated specification and analysis techniques and their role in supporting the design of interactive systems
