Formalization of Programming Concepts J. Diaz, I. Ramos, 2014-01-15      **Formalization of Programming Concepts** J. Diaz, I. Ramos, 1981-04      **Formal Description of Programming Concepts** Erich Neuhold, Manfred Paul, 1991-10-04 In software engineering there is a growing need for formalization as a basis for developing powerful computer assisted methods This volume contains seven extensive lectures prepared for a series of IFIP seminars on the Formal Description of Programming Concepts The authors are experts in their fields and have contributed substantially to the state of the art in numerous publications The lectures cover a wide range in the theoretical foundations of programming and give an up to date account of the semantic models and the related tools which have been developed in order to allow a rigorous discussion of the problems met in the construction of correct programs In particular methods for the specification and transformation of programs are considered in detail One lecture is devoted to the formalization of concurrency and distributed systems and reflects their great importance in programming Further topics are the verification of programs and the use of sophisticated type systems in programming This compendium on the theoretical foundations of programming is also suitable as a textbook for special seminars on different aspects of this broad subject      **Logics of Programs** Rohit Parikh, 1985-06      *Program Specification* J. Staunstrup, 1982-04      **Algebraic Methods in Semantics** M. Nivat, John C. Reynolds, 1985 This book which contains contributions from leading researchers in France USA and Great Britain gives detailed accounts of a variety of methods for describing the semantics of programming languages i e for attaching to programs mathematical objects that encompass their meaning Consideration is given to both denotational semantics where the meaning of a program is regarded as a function from inputs to outputs and operational semantics where the meaning includes the sequence of states or terms generated internally during the computation The major problems considered include equivalence relations between operational and denotational semantics rules for obtaining optimal computations especially for nondeterministic programs equivalence of programs meaning preserving transformations of programs and program proving by assertions Such problems are discussed for a variety of programming languages and formalisms and a wealth of mathematical tools is described      *Stochastic Automata: Stability, Nondeterminism and Prediction* E.-E. Doberkat, 1981-06      *Bibliography on Abstract Data Types* B. Kutzler, F. Mizin, 2012-12-06 During the last few years computers have evolved from pure number crunching machines to intelligent problem solving tools Increasing effort has been spent on the investigation of new approaches and the application of solutions to real world problems In this way exciting new techniques have evolved providing support for an increasing number of technical and economical aspects Applications range from the design and development of ultra highly integrated circuits to totally new man machine interfaces from software engineering tools to fault diagnosis systems from decision support to even the analysis of unemployment

Following a first joint workshop on Advanced Information Processing held in July 1988 at the Institute for Problems of Informatics of the USSR Academy of Sciences IPIAN at Moscow this was the second time that scientists and researchers from the USSR Academy of Sciences and Siemens AG Corporate Research and Development exchanged results and discussed recent advances in the field of applied computer sciences Initiated by Prof Dr I Mizin Corresponding Member of the USSR Academy of Sciences and Director of IPIAN and Prof Dr H Schwartzel Vice President of the Siemens AG and Head of the Applied Computer Science Software Department a joint symposium was arranged at the USSR Academy of Sciences in Moscow on June 5th and 6th 1990 The meetings on Information Processing and Software and Systems Design Automation provided a basis both for presentations of ongoing research and for discussions about specific problems Semantics of Programming Languages and Model Theory Manfred Droste, Yuri Gurevich, 1993-09-10 Fourteen papers presented at the conference on title held at the International Conference and Research Center for Computer Science Schloss Dagstuhl June 1991 as well as a few others submitted by colleagues unable to attend reflect the interplay between algebra logic and semantics of programming languages Among the topics are a formal specification of PARLOG synthesis of nondeterministic asynchronous automata observable modules and power domain constructions the Smyth completion of a quasi uniform space current trends in the semantics of data flow and a theory of unary pairfunctions Annotation copyright by Book News Inc Portland OR

Nishizeki, 1981-05 A Companion to Atheism and Philosophy Graham Oppy, 2019-03-22 PROSE 2020 Single Volume Reference Finalist Philosophers throughout history have debated the existence of gods but it is only in recent years that the absence of such a belief has become a significant topic of philosophical analysis in particular for philosophers of religion Although it is difficult to trace the historical contours of atheism as the lack of belief in a higher power the reasoned reflective and thoughtful rejection of theism has become commonplace in many modern intellectual circles including academic philosophy where disciplinary data indicates that a large majority of philosophers self identify as atheists As the first book of its kind to bring together a collection of writing on the philosophical aspects of atheism both historical and contemporary the Companion to Atheism and Philosophy stages an explicit constructive and comprehensive conversation between philosophy and atheism to examine the ways in which atheist thought intersects with ideas and positions from a variety of philosophical and theological sub disciplines The Companion begins by addressing the foundational questions and lingering controversies which underpin philosophical thought about atheism exploring the implications of major developments in the history of philosophy for the modern atheistic worldview Divided into eight distinct sections essays consider a range of thinkers who were widely believed to have been atheists including David Hume Mary Wollstonecraft Karl Marx and Elizabeth Cady Stanton and survey different kinds of objections to theism and atheism including logical evidential normative and prudential Later chapters trace the relationship between atheism and metaphysics epistemology ethics and political philosophy oriented around topics such as pragmatism

**Programming with Specifications** David Luckham, 2012-12-06 Topics what this book is about its intended audience what the reader ought to know how the book is organized acknowledgements Specifications express information about a program that is not normally part of the program and often cannot be expressed in a programming language In the past the word specification has sometimes been used to refer to somewhat vague documentation written in English But today it indicates a precise statement written in a machine processable language about the purpose and behavior of a program Specifications are written in languages that are just as precise as programming languages but have additional capabilities that increase their power of expression The terminology formal specification is sometimes used to emphasize the modern meaning For us all specifications are formal The use of specifications as an integral part of a program opens up a whole new area of programming programming with specifications This book describes how to use specifications in the process of building programs debugging them and interfacing them with other programs It deals with a new trend in programming the evolution of specification languages from the current generation of programming languages And it describes new strategies and styles of programming that utilize specifications The trend is just beginning and the reader having finished this book will viii Preface certainly see that there is much yet to be done and to be discovered about programming with specifications
