Ferris,H.R. Burton,G.W. Johnstone,I.A.E. Bayly,2012-12-06 The present volume was conceived as a companion to Antarctic Oasis Terrestrial environments and history of the Vestfold Hills edited by J Pickard and published in 1986 by Academic Press Sydney Pickard s book contains accounts of the Vestfold Hills climate N A Streten and recent geomorphological history D A Adamson J Pickard which provide a valuable context for understanding their present day biology Pickard also gives a history of human discovery and occupation of the Vest fold Hills There is some overlap in the coverage to the extent that both this volume and Pickard s book describe the terrestrial flora and fauna The

reader specifically interested in the terrestrial ecosystems of the Vestfold Hills should draw from both sources Together these works present a broad and descriptive account of the largest truly coastal antarctic oasis a region that holds a unique variety of opportunities for future scientific investigation There are several tasks I wish to accomplish here apart from expressing my sincere thanks to the many people who have contributed to the completion of this volume I wish to briefly introduce the Vestfolds and to list some of the features that in my opinion make them biologically varied and unique in the context of other coastal ice free areas I wish to describe the phases of biological research in this region including the directions that have been pursued since the 1984 symposium and to comment upon the future of the Vestfold Hills Host

Ivany,Elizabeth A. Nesbitt,2003 The marine Eocene Oligocene transition of 34 million years ago was a critical turning point in Earth s climatic history when the warm high diversity greenhouse world of the early Eocene ceded to the glacial icehouse conditions of the early Oligocene This book surveys the advances in stratigraphic and paleontological research and isotopic analysis made since 1989 in regard to marine deposits around the world In particular it summarizes the high resolution details of the so called doubthouse interval roughly 45 to 34 million years ago which is critical to testing climatic and evolutionary hypotheses about the Eocene deterioration The authors goals are to discuss the latest information concerning climatic and oceanographic change associated with this transition and to examine geographic and taxonomic patterns in biotic turnover that provide clues about where when and how fast these environmental changes happened They address a range of topics including the tectonic and paleogeographic setting of the Paleogene specific issues related to the stratigraphy of shelf deposits advances in recognizing and correlating boundary sections trends in the expression of climate change and patterns of faunal and floral turnover In the process they produce a valuable synthesis of patterns of change by latitude and environment
