

Appendages

- Several structures project through the cell wall of bacteria to form surface appendages
- The most commonly observed are flagella & pili

	① Flagella	② Pili or fimbriae (singular: pilus)
Diameter	Only 20 nm in diameter → too small to be detected by light microscope → they can be demonstrated clearly with the electron microscope	Shorter & thinner than flagella → can be observed only by the electron microscope
Structure	Flagella consist of protein called flagellin → which differs in different bacterial species → the flagellins are highly antigenic (H antigen)	Protein tubes that extend from the cells → they are composed of protein subunits termed pilins
Location & number	Location & number of flagella on a cell vary according to bacterial species → Organisms may be: <ul style="list-style-type: none"> ① Monotrichous (single polar flagellum), ② Lophotrichous (multiple polar flagella), ③ Peritrichous (flagella distributed over the entire cell surface) 	Short pili (fimbriae) → distributed over the entire cell surface
Functions	<p>Many bacteria move by means of flagella → Motile bacteria migrate towards regions where there is higher concentration of nutrients & solutes (process known as chemotaxis) & away from disinfecting substances (negative chemotaxis)</p> <p>Axial filaments</p> <ul style="list-style-type: none"> Structurally & chemically, fibres of axial filaments are similar to flagella & they are sometimes called "endoflagella" Spirochaetes move by means of these axial filaments These structures are composed of two groups of fibres that originate within the opposite ends of the cell and overlap in the middle → when the cell moves, it rotates around its longitudinal axis & flexes & bends along its length 	<p>① Adherence</p> <ul style="list-style-type: none"> It is the function of the short pili (fimbriae) that occur in great numbers around the cell They enable bacteria to attach to the surfaces → thus contributing to the establishment of infection → virulence factor For example, <i>N. gonorrhoeae</i>, withstands the flushing action of urine by adhering to urethral mucosa <p>② Conjugation</p> <p>Special long pilus called sex pilus (F pilus) is involved in transfer of DNA between bacteria → process known as conjugation</p>

Forms Of Explanation:

Forms of Explanation Alan Garfinkel, 1981 What makes one explanation better than another How can we tell when an explanation has really answered our question In a lively and readable discussion Garfinkel argues that the key to understanding an explanation is to discover what question is really being answered He then suggests criteria for a good explanation and goes on to examine some classic explanations in social and natural science *Lessons on Form* August Blunck, 1918 *Visual Differential Geometry and Forms* Tristan Needham, 2021-07-13 An inviting intuitive and visual exploration of differential geometry and forms Visual Differential Geometry and Forms fulfills two principal goals In the first four acts Tristan Needham puts the geometry back into differential geometry Using 235 hand drawn diagrams Needham deploys Newton's geometrical methods to provide geometrical explanations of the classical results In the fifth act he offers the first undergraduate introduction to differential forms that treats advanced topics in an intuitive and geometrical manner Unique features of the first four acts include four distinct geometrical proofs of the fundamentally important Global Gauss Bonnet theorem providing a stunning link between local geometry and global topology a simple geometrical proof of Gauss's famous Theorema Egregium a complete geometrical treatment of the Riemann curvature tensor of an n manifold and a detailed geometrical treatment of Einstein's field equation describing gravity as curved spacetime General Relativity together with its implications for gravitational waves black holes and cosmology The final act elucidates such topics as the unification of all the integral theorems of vector calculus the elegant reformulation of Maxwell's equations of electromagnetism in terms of 2 forms de Rham cohomology differential geometry via Cartan's method of moving frames and the calculation of the Riemann tensor using curvature 2 forms Six of the seven chapters of Act V can be read completely independently from the rest of the book Requiring only basic calculus and geometry Visual Differential Geometry and Forms provocatively rethinks the way this important area of mathematics should be considered and taught *Principles of Methodology* Perri 6, 2011-10-31 This book provides a comprehensive accessible guide to social science methodology In so doing it establishes methodology as distinct from both methods and philosophy Most existing textbooks deal with methods or sound ways of collecting and analysing data to generate findings In contrast this innovative book shows how an understanding of methodology allows us to design research so that findings can be used to answer interesting research questions and to build and test theories Most important things in social research e.g. beliefs institutions interests practices and social classes cannot be observed directly This book explains how empirical research can nevertheless be designed to make sound inferences about their nature effects and significance The authors examine what counts as good description explanation and interpretation and how they can be achieved by striking intelligent trade offs between competing design virtues Coverage includes why methodology matters what philosophical arguments show us about inference competing virtues of good research design purposes of theory models and frameworks forming researchable concepts and typologies

explaining and interpreting inferring causation meaning and significance and combining explanation and interpretation The book is essential reading for new researchers faced with the practical challenge of designing research Extensive examples and exercises are provided based on the authors long experience of teaching methodology to multi disciplinary groups Perri 6 is Professor of Social Policy in the Graduate School in the College of Business Law and Social Sciences at Nottingham Trent University Chris Bellamy is Emeritus Professor of Public Administration in the Graduate School Nottingham Trent University
