The Ordo Virtutum Hildegard von Bingen's twelfth century music drama is one of the first known examples of a large scale composition by a named composer in the Western canon. Not only does the Ordo's expansive duration set it apart from its precursors but also its complex imagery and non-biblical narrative have raised various questions concerning its context and genre. As a poetic meditation on the fall of a soul, the Ordo deploys an array of

personified virtues and musical forces over the course of its eighty seven chants In this ambitious analysis of the work Michael C Gardiner examines how classical Neoplatonic hierarchies are established in the music drama and considers how they are mediated and subverted through a series of concentric absorptions absorptions related to medieval Platonism and its various theological developments which lie at the core of the work s musical design and text This is achieved primarily through Gardiner s musical network model which implicates mode into a networked system of nodes and draws upon parallels with the medieval interpretation of Platonic ontology and Hildegard s correlative realization through sound song and voice
