Geophysics, Realism, and Industry Aitor Anduaga,2015-12-17 Did industry and commerce affect the concepts values and epistemic foundations of different sciences If so how and to what extent This book suggests that the most significant influence of industry on science in the two case studies treated here had to do with the issue of realism Using wave propagation as the common thread this is the first book to simultaneously analyse the emergence of realist attitudes towards the entities of the ionosphere and of the earth s crust However what led physicists and engineers to adopt realist attitudes This book suggests that a new kind of realism a realism of social and cultural origins is the answer a preliminary entity realism responding to specific commercial and engineering interests and a realism that was neither strictly instrumental nor exclusively operational The book has two parts while Part I focuses on the study of the ionosphere and how the British radio industry affected ionospheric physics Part II focuses on the study of the Earth s crust and how the American oil industry affected crustal seismology **Electronic Genie** Frederick Seitz,Norman G. Einspruch,1998 Electronic Genie takes its readers on a two century journey that begins with Antoine Lavoisier s prediction of the existence of silicon as an element It traces the emergence of silicon as key to the development of most forms of today s electronics and its role in making possible the revolutionary digital computer Loaded with information about such original thinkers as Lavoisier John Bardeen Bill Gates Patrick Haggerty Gordon Moore and many more the volume traces the use of silicon in metallurgy as a diode rectifier in wireless and radio and ultimately as a nonlinear element for heterodyne mixing in radar during World War II Electronic Genie will appeal to students of science and technology as well as to anyone interested in the history of these fields The High-Latitude Ionosphere and its Effects on Radio Propagation R. D. Hunsucker,J. K. Hargreaves,2007-09-10 The physical properties of the ionized layer in the Earth s upper atmosphere enable us to use it to support an increasing range of communications applications This book presents a modern treatment of the physics and phenomena of the high latitude upper atmosphere and the morphology of radio propagation in the auroral and polar regions Chapters cover the basics of radio propagation and the use of radio techniques in ionospheric studies Many investigations of high latitude radio propagation have previously only been published in Conference Proceedings and organizational reports This book includes

many examples of the behavior of quiet and disturbed high latitude HF propagation Ample cross referencing chapter summaries and reference lists make this book an invaluable aid for graduate students ionospheric physicists and radio engineers **NBS Special Publication** ,1966 *Geophysics, Realism, and Industry* Aitor Anduaga Egaña,2016 Getting Real is the first book to simultaneously study the emergence of realist attitudes towards the entities layers of the ionosphere and the earth s crust It proposes a new kind of realism a realism of social and cultural origins an entity realism responding to specific commercial and engineering interests **Miscellaneous Publication - National Bureau of Standards** United States. National Bureau of Standards,1934 **National Bureau of Standards Miscellaneous Publication** ,1966

Solar and Space Weather Radiophysics D.E. Gary,C.U. Keller,2006-01-20 This volume is the outgrowth of several international meetings to discuss a vision for the future of solar radio physics the development of a new radio instrument From these discussions the concept for the Frequency Agile Solar Radiotelescope FASR was born Most of the chapters of this book are based oninvitedtalksattheFASRScienceWorkshop heldinGreenbank WVinMay 2002 and a special session on Solar and Space Weather Radiophysics held at the 200th American Astronomical Society meeting held in Albuquerque NM in June 2002 Although many of the chapters deal with topics of interest in planning for FASR other topics in Solar and Space Weather Radiophysics such as solar radar and interplanetary scintillation are covered to round out the discipline The authors have been asked to write with a tutorial approach to make the book useful to graduate students and scientists new to radio physics This book is more than a compilation of FASR science topics The FASR instrument concept is so revolutionary by extending capability by an order of magnitude in several dimensions at once frequency coverage spatial reso tion dynamicrange timeresolution polarizationprecision thatit challenges scientiststothinkinnewways Theauthorsofthefollowingchaptershavebeen taskednotonlywithreviewingthecurrentstateofthe eld butalsowithlooking to the future and imagining what is possible Radio emission is extremely complex because it is generated so readily and every imaginable plasma parameter affects it This is both its great strength and its weakness *Why TV is Not Our Fault* Eileen R.

Meehan,2005 For more than five decades we've been told by pundits commentators advertisers scholars and politicians that television is both a window on the world and a mirror reflecting our culture We've been led to believe that it shows us the world's events through news programs and through entertainment programs reflects the preferences values beliefs and understandings shared by most Americans We're told that if you don't like what you see on TV don't blame the industry blame yourself This book dispels the myth that the television industry is just giving viewers the programming they want to see and thus we as viewers are responsible for the existence of shows like Fear Factor and yet another Survivor In fact Eileen Meehan explains viewers exert no demand in the market for ratings advertising slots program production or telecasting She also counters the idea that TV programs reflect our culture directly Introducing us to the political economy of television Meehan covers programming corporate strategies advertising the misnomer of competition among networks and organizations that seek more industry accountability She tells us why TV isn't our fault and who's really to blame The Emerald Planet David Beerling,2007-02-22 Global warming is contentious and difficult to measure even among the majority of scientists who agree that it is taking place Will temperatures rise by 2 C or 8 C over the next hundred years Will sea levels rise by 2 or 30 feet The only way that we can accurately answer questions like these is by looking into the distant past for a comparison with the world long before the rise of mankind We may currently believe that atmospheric shifts like global warming result from our impact on the planet but the earth's atmosphere has been dramatically shifting since its creation This book reveals the crucial role that plants have played in determining atmospheric change and hence the conditions on the planet we know today Along the way a number of fascinating puzzles arise Why did plants evolve leaves When and how did forests once grow on Antarctica How did prehistoric insects manage to grow so large The answers show the extraordinary amount plants can tell us about the history of the planet something that has often been overlooked amongst the preoccupations with dinosaur bones and animal fossils David Beerling's surprising conclusions are teased out from various lines of scientific enquiry with evidence being brought to bear from fossil plants and animals computer models of the atmosphere and experimental studies Intimately bound up with the narrative describing the dynamic evolution of climate and life through Earth's history we find Victorian fossil hunters intrepid polar explorers and pioneering chemists alongside wallowing hippos belching volcanoes and restless landmasses
