Ungar, 2014-03-27 Teeth are amazing the product of half a billion years of evolution They provide fuel for the body by breaking apart other living things and they must do it again and again over a lifetime without themselves being broken in the process This means that plants and animals have developed tough or hard tissues for protection and teeth have evolved ways to sharpen or strengthen themselves to overcome those defences And just as different jobs require different tools animals with different diets have different shaped teeth to deal with the variety of foods that they eat In this Very Short Introduction Peter S Ungar an award winning author and leading scientist presents the story of teeth Ungar outlines the key concepts including insights into the origin of teeth and their evolution Considering why teeth are important he describes how they are made and how they work including their fundamental importance in the fossil record Ungar finishes with a review of mammal teeth looking at how they evolved and how recent changes to our diet are now affecting dental health ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make Human Evolution: A Very Short Introduction Bernard interesting and challenging topics highly readable Wood, 2005-11-03 This Very Short Introduction traces the history of paleoanthropology from its beginnings in the eighteenth century to the latest fossil finds Although concentrating on the fossil evidence for human evolution it also covers the latest genetic evidence about regional variations in the modern human genome that relate to our evolutionary history Bernard Wood draws on over thirty years of experience to provide an insider s view of the field and some of the personalities in it and demonstrates that our understanding of human evolution is critically dependent on advances in related sciences such as paleoclimatology geochronology systematics genetics and developmental biology ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable Landscapes and Geomorphology: A Very Short Introduction Andrew Goudie, Heather Viles, 2010-08-26 Examining what landscape is and how we use a range of ideas and techniques to study it Andrew Goudie and Heather Viles demonstrate how geomorphologists have built on classic methods pioneered by some great 19th century scientists to examine our Earth The Traveling Anatomist Nuno Castel-Branco, 2025-10-07 Reevaluates Nicolaus Steno's contributions to anatomy and early modern science examining his interdisciplinary interests in their historical context Nicolaus Steno 1638 1686 was a renowned anatomist in his lifetime He reformed the anatomical understanding of glands argued that the heart was a muscle renamed the so called female testicles as ovaries and developed a mathematical model for understanding muscle contraction discoveries that were fundamental to the fields of anatomy and physiology However other aspects of Steno s life have come to define him his claim that mountains

strata reveal the history of the Earth and his conversion to Catholicism as a practicing scientist This excessive attention to his geological discoveries and to asking whether science and religion are compatible Nuno Castel Branco argues has obscured his significant accomplishments as an anatomist The Traveling Anatomist thus restores Steno to his rightful place as a crucial figure in early modern science Using Steno's extensive travels as a framework this book depicts him as an active participant in the Republic of Letters Castel Branco traverses Leiden Paris Copenhagen Florence and Rome as he follows Steno in his sojourns through different scientific academies courts and artisanal workshops There he developed new friends some of whom were women with whom he researched and exchanged ideas Drawing on Steno's books correspondence and novel archival material Castel Branco invites us to approach Steno and his accomplishments in anatomy mathematics and geology through the eyes of his contemporaries Doing so Castel Branco reconstructs the rich and overlapping worlds of scientific disciplines that shaped Steno s work revealing the richness of interdisciplinary research in early modern intellectual life And through Steno he illustrates larger developments and new networks of significance in mid seventeenth century science By focusing on ideas scientific genres institutions and friendships Castel Branco offers a way others might also productively study science from the early modern period until today Food: A Very Short Introduction John Krebs, 2013-09-26 Drawing on a mixture of science and history Prof Lord John Krebs looks at the development of food and the four great transitions that affected the way we eat From issues such as the obesity crisis and sustainable agriculture to food scares and the role of new technologies Krebs provides a fascinating exploration of the history of human food **Short Introduction** T. S. Kemp, 2017-09-21 From a modest beginning in the form of a little shrew like nocturnal insect eating ancestor that lived 200 million years ago mammals evolved into the huge variety of different kinds of animals we see today Many species are still small and follow the lifestyle of the ancestor but others have adapted to become large grazers and browsers like the antelopes cattle rhinos and elephants or the lions hyaenas and wolves that prey upon them Yet others evolved to be specialist termite eaters able to dig into the hardest mounds or tunnel creating burrowers and a few took to the skies as gliders and the bats Many live partly in the water such as otters beavers and hippos while whales and dugongs remain permanently in the seas incapable of ever emerging onto land In this Very Short Introduction T S Kemp explains how it is a tenfold increase in metabolic rate endothermy or warm bloodedness that lies behind the high levels of activity and the relatively huge brain associated with complex adaptable behaviour that epitomizes mammals He describes the remarkable fossil record revealing how and when the mammals gained their characteristics and the tortuous course of their subsequent evolution during which many bizarre forms such as sabre toothed cats and 30 tonne 6 m high browsers arose and disappeared Describing the wonderful adaptations that mammals evolved to suit their varied modes of life he also looks at those of the mainly arboreal primates that culminated ultimately in Homo sapiens ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized
