Integrated History and Philosophy of Science Emily Herring, Kevin Matthew Jones, Konstantin S. Kiprijanov, Laura M Sellers, 2019-05-14 Integrated History and Philosophy of Science iHPS is commonly understood as the study of science from a combined historical and philosophical perspective Yet since its gradual formation as a research field the question of how to suitably integrate both perspectives remains open This volume presents cutting edge research from junior iHPS scholars and in doing so provides a snapshot of current developments within the field explores the connection between iHPS and other academic disciplines and demonstrates some of the topics that are attracting the attention of scholars who will help define the future of iHPS **A New Foundation for Representation in Cognitive and Brain Science** Jaime

Gómez-Ramírez, 2013-11-22 The purpose of the book is to advance in the understanding of brain function by defining a general framework for representation based on category theory The idea is to bring this mathematical formalism into the domain of neural representation of physical spaces setting the basis for a theory of mental representation able to relate

empirical findings uniting them into a sound theoretical corpus The innovative approach presented in the book provides a horizon of interdisciplinary collaboration that aims to set up a common agenda that synthesizes mathematical formalization and empirical procedures in a systemic way Category theory has been successfully applied to qualitative analysis mainly in theoretical computer science to deal with programming language semantics Nevertheless the potential of category theoretic tools for quantitative analysis of networks has not been tackled so far Statistical methods to investigate graph structure typically rely on network parameters Category theory can be seen as an abstraction of graph theory Thus new categorical properties can be added into network analysis and graph theoretic constructs can be accordingly extended in more fundamental basis By generalizing networks using category theory we can address questions and elaborate answers in a more fundamental way without waiving graph theoretic tools The vital issue is to establish a new framework for quantitative analysis of networks using the theory of categories in which computational neuroscientists and network theorists may tackle in more efficient ways the dynamics of brain cognitive networks The intended audience of the book is researchers who wish to explore the validity of mathematical principles in the understanding of cognitive systems All the actors in cognitive science philosophers engineers neurobiologists cognitive psychologists computer scientists etc are akin to discover along its pages new unforeseen connections through the development of concepts and formal theories described in the book Practitioners of both pure and applied mathematics e g network theorists will be delighted with the mapping of abstract mathematical concepts in the terra incognita of cognition

The Science and Applications of Synthetic and Systems Biology

Institute of Medicine, Board on Global Health, Forum on Microbial Threats, 2011-12-30 Many potential applications of synthetic and systems biology are relevant to the challenges associated with the detection surveillance and responses to emerging and re emerging infectious diseases On March 14 and 15 2011 the Institute of Medicine's IOM's Forum on Microbial Threats convened a public workshop in Washington DC to explore the current state of the science of synthetic biology including its dependency on systems biology discussed the different approaches that scientists are taking to engineer or reengineer biological systems and discussed how the tools and approaches of synthetic and systems biology were being applied to mitigate the risks associated with emerging infectious diseases The Science and Applications of Synthetic and Systems Biology is organized into sections as a topic by topic distillation of the presentations and discussions that took place at the workshop Its purpose is to present information from relevant experience to delineate a range of pivotal issues and their respective challenges and to offer differing perspectives on the topic as discussed and described by the workshop participants This report also includes a collection of individually authored papers and commentary
