Drickamer, 1996-08 Beginning with Darwin s work in the 1870s Foundations of Animal Behavior selects the most important works from the discipline s first hundred years forty four classic papers and presents them in facsimile tracing the development of the field These papers are classics because they either founded a line of investigation established a basic method or provided a new approach to an important research question The papers are divided into six sections each introduced by prominent researchers Sections one and two cover the origins and history of the field and the emergence of basic methods and approaches They provide a background for sections three through six which focus on development and learning neural and hormonal mechanisms of behavior sensory processes orientation and communication and the evolution of behavior This outstanding collection will serve as the basis for undergraduate and graduate seminars and as a reference for researchers in animal behavior whether they focus on ethology behavioral ecology comparative psychology or anthropology Published in association with the Animal Behavior Society **Embryology of the Eye and Its Adnexa** Y. Robert Barishak, 2001-01-01 This monograph unlike most previously published books on the subject approaches the embryology of the eye and its adnexae from the perspective of gestational age providing a unique overall view of the various structures of the eye at different stages of prenatal development Embryogenesis organogenesis and differentiation are three main periods that can be distinguished in the prenatal development of the human eye The chapters in this book describe in detail the series of sequential events that occur during these periods from the fertilization of the ovum to and after birth Superbly illustrated and clearly written this text contains a wealth of information for residents in ophthalmology neonatal and pediatric ophthalmologists as well as for all ophthalmologists and physicians interested in developmental anomalies Beyond Mechanism Brian G. Henning, Adam Scarfe, 2013-02 It has been said that new discoveries and developments in the human social and natural sciences hang in the air Bowler 1983 2008 prior to their consummation While neo Darwinist biology has been powerfully served by its mechanistic metaphysic and a reductionist methodology in which living organisms are considered machines many of the chapters in this volume place this paradigm into question Pairing scientists and philosophers together this volume explores what might be termed the New Frontiers of biology namely contemporary areas of research that appear to call an updating a supplementation or a relaxation of some of the main tenets of the Modern

Synthesis Such areas of investigation include Emergence Theory Systems Biology Biosemiotics Homeostasis Symbiogenesis Niche Construction the Theory of Organic Selection also known as the Baldwin Effect Self Organization and Teleodynamics as well as Epigenetics Most of the chapters in this book offer critical reflections on the neo Darwinist outlook and work to promote a novel synthesis that is open to a greater degree of inclusivity as well as to a more holistic orientation in the biological sciences
