Foundations of language Ray Jackendoff, 2002 *Outside-In □ Inside-Out* Costantino Maeder, Olga

Fischer, William J. Herlofsky, 2005-02-28 This fourth volume of the Iconicity series is like its predecessors devoted to the study of iconicity in language and literature in all its forms Many of the papers turn the notion of iconicity inside out some suggesting that less is more others focus on the cognitive factors inside the brain that are important for the iconic phenomena that are produced in the outside world In addition this volume includes a paper related to iconicity in music and its interaction with language Other papers range from the theoretical issues involved in the evolution of language to those that offer many inside out claims such as claiming that nouns are derived from pronouns and as such should more properly be called pro pronouns Also this volume includes perhaps the first English language analysis of the iconic aspects of sound symbolism in a prayer from the Koran This is a truly interdisciplinary collection that should turn some of the notions of iconicity in language and literature outside in and inside out *Dialogue and Culture* Marion Grein, Edda

Weigand, 2007-12-06 The volume deals with the relationship between language dialogue human nature and culture by focusing on an approach that considers culture to be a crucial component of dialogic interaction Part I refers to the so called language instinct debate between nativists and empiricists and introduces a mediating position that regards language and dialogue as determined by both human nature and culture This sets the framework for the contributions of Part II which propose varying theoretical positions on how to address the ways in which culture influences dialogue Part III presents more empirically oriented studies which demonstrate the interaction of components in the mixed game and focus in particular on specific action games politeness and selected verbal means of communication Syntactic Processing Carlos

More than Nature Needs Derek Bickerton, 2014-01-13 How did humans acquire cognitive capacities far more powerful than any hunting and gathering primate needed to survive Alfred Russel Wallace co founder with Darwin of evolutionary theory set humans outside normal evolution Darwin thought use of language might have shaped our sophisticated brains but this remained an intriguing guess until now Combining state of the art research with forty years of writing and thinking about language origins Derek Bickerton convincingly resolves a crucial problem that biology and the cognitive sciences have systematically avoided Before language or advanced cognition could be born humans had to escape the prison of the here and now in which animal thinking and communication were both trapped Then the brain's self organization triggered by words assembled mechanisms that could link not only words but the concepts those words symbolized a process that had to be under conscious control Those mechanisms could be used equally for thinking and for talking but the skeletal structures they produced were suboptimal for the hearer and had to be elaborated Starting from humankind's remotest past *More than Nature Needs* transcends nativist thesis and empiricist antithesis by presenting a revolutionary synthesis that shows specifically and in a principled way how and why the synthesis came about

The Emergence of Protolanguage Michael A. Arbib, Derek Bickerton, 2010-09-03 Somewhere and somehow in the 5 to 7 million years since the last common ancestors of humans and the great apes our ancestors got language The authors of this volume all agree that there was no single mutation or cultural innovation that took our ancestors directly from a limited system of a few vocalizations primarily innate and gestures some learned to language They further agree to use the term protolanguage for the beginnings of an open system of symbolic communication that provided the bridge to the use of fully expressive languages rich in both lexicon and grammar But here consensus ends and the theories presented here range from the compositional view that protolanguage was based primarily on words akin to the nouns and verbs etc we know today with only syntax lacking to the holophrastic view that protolanguage used protowords which had no meaningful subunits which might nonetheless refer to complex but significantly recurrent events The present volume does not decide the matter but it does advance our understanding The lack of any direct archaeological record of protolanguage might seem to raise insuperable difficulties However this volume exhibits the
