Catalog National Library of Medicine (U.S.), 1966 **Foundations of Developmental Psychology** Richard C. LaBarba, 2013-09-25 *Foundations of Developmental Psychology* is designed for the student seeking a comprehensive introduction to developmental psychology as a developmental science The intent is to introduce the field in a manner comparable to the introductory courses that college students take in biology chemistry or physics The emphasis is on the empirical and theoretical foundations of fundamental human development The book attempts to trace the origins and processes of various developmental events Developmental phenomena are presented by topics rather than by chronological age related patterns of development This arrangement of the subject matter provides for more efficient study integration and synthesis of the material along with a more organized view of development Key topics discussed include the genetic foundations of development prenatal factors in development the biological notion of maturation and its significance for development motor and perceptual development and cognitive intellectual language emotional personality and social development Although this text is written for undergraduate students in psychology it can be understood by students in any discipline who have a grasp of introductory psychology and biology Reconstituting the Curriculum M. R. Islam, Gary M. Zatzman, Jaan S. Islam, 2013-11-13 Based on groundbreaking new ideas this treatise signals a return to a rebuilding and reshaping of the curriculum as the primary tool for education This book presents a new definition of curriculum and what it should consist of with a view toward creating a more ethical educated and thinking person Rather than treating students as products for society this approach returns to a view of the curriculum as a tool for educating students to reason through problems be bold in creating new solutions and contribute to a more vibrant just world The university curriculum introduced in the post Renaissance era dominated by doctrinal philosophy is based on learning or skill development suitable for creating a learned society that would eventually serve the establishment This curriculum has been promoted as the only form suitable

for the modern education system It has introduced a tremendous amount of tangible advancement in all fields of the structured education system These tangible gains are often promoted as knowledge This has created confusion between education acquiring knowledge and learning training or skill development This book seeks to clarify the difference between these two divergent views of education It has been shown that the current curriculum is not conducive to increasing a student's knowledge because it is based on consolidating preconceived ideas that have been either passed on from previous generations or gained through personal experience In most cases this mode of cognition will not create a pathway for gaining knowledge that brings one closer to discovery The term education on the other hand is always meant to be a process of bringing forth one's inherent qualities and unique traits necessary and sufficient for increasing one's knowledge

Contemporary Issues in Bioethics James J. Walter, Thomas A. Shannon, 2005-12-08 *Contemporary Issues in Bioethics A Catholic Perspective* applies the best of the Roman Catholic theological and ethical tradition to some of the most controversial and complex bioethical topics that confront contemporary society Walter and Shannon offer a fresh analysis of the Catholic tradition and show how a distinctively Catholic perspective can inform public discussion of these issues In an age where religion is often excluded from ethical discussions on bioethical issues this book shows that the Catholic tradition has something very important to offer Book Jacket National Library of Medicine Current Catalog National Library of Medicine (U.S.), **Foundations of Biology** Lorande Loss Woodruff, 1927 **Current Catalog** National Library of Medicine (U.S.), First multi year cumulation covers six years 1965-70 **Veterinary Embryology** T. A. McGeary, P. J. Quinn, E. S. Fitzpatrick, M. T. Ryan, D. Kilroy, P. Lonergan, 2017-02-06 *Veterinary Embryology* 2nd Edition has been updated to reflect the many changes that have developed in the field the text has been fully revised and expanded and is now in full colour and many pedagogical features and a companion website have been developed A new edition of this highly successful student textbook updated to reflect the latest developments in the field of embryology with the inclusion of four new chapters Written by a team of authors with extensive experience of teaching this subject Short concise chapters on key topics describe complex concepts in a user friendly way Additional tables flow diagrams and numerous hand drawn illustrations support the concepts presented in the text The New Genetic Medicine Thomas Anthony Shannon, James J. Walter, 2003 Since the 1970s the interrelated areas of medical genetics and biotechnology have developed dramatically and afforded increased control over the design of living organisms From the very beginning controversies over these techniques and their applications to plants animals and humans have raged in many disciplines including science philosophy ethics and religion This book brings together the seminal essays of two leading Catholic moral theologians Thomas Shannon and James Walter in an effort to identify the key ethical and theological questions raised by the new genetic medicine What is unique about this book is that it specifically and directly brings modern genetics and the Roman Catholic theological and ethical tradition into dialogue While the authors argue that the Catholic tradition has much to offer in putting this current scientific revolution into

perspective they well understand the need to avoid merely repeating the tradition in favor of bringing the best of the tradition to bear on the precise questions posed by modern genetic technology
