Frontiers in Gastrointestinal Cancer Bernard Levin, Robert H. Riddell, 1984 **Gastrointestinal Cancer Immunotherapy: from Drug Resistance Mechanisms to Overcoming Strategies** Xiaofang Che, Yibo Fan, Jinyan Wang, Chunlei Zheng, Jia Wei, 2023-06-15

Gastrointestinal GI cancers including gastric cancer colon cancer liver cancer esophageal cancer and pancreatic cancer seriously threaten the health of human beings worldwide with a high rate of morbidity and mortality The clinical successes achieved with immune checkpoint inhibitors ICIs targeting PD 1 PD L1 and CTLA 4 have opened a new cancer therapy era and brought new hope to cancer patients However the overall response rate ORR of ICI monotherapy in the non selective population is only about 20% in which some patients subsequently develop immunotherapy resistance Moreover the remaining 70 80% of patients displayed primary resistance to ICIs and a few patients even experienced hyper progression disease HPD Although PD L1 expression mismatch repair deficient MMRd high tumor mutational burden TMB H high homologous recombination deficiency HRD and tumor infiltrated immune cells TILs are known as effective biomarkers for immunotherapy growing studies have reported that ICIs could not improve the OS of all patients with PD L1 expression higher than 50% and the ORR of MSI H patients was only about 60% whereas some patients with low PD L1 expression or MSS could still benefit from immunotherapy indicating the complexity of ICI resistance Therefore it is of great importance and significance to explore the prediction biomarkers for primary or acquired immunotherapy resistance and elucidate their underlying molecular mechanisms and develop reversal strategies Due to the multiple steps of the cancer immune cycle and complex immune microenvironment any disorders of immune cell infiltration or T cell activation such as lack of antigens and or their presentation lack of response to antigen presentation and T cell priming could contribute to ICI resistance The combination with anti angiogenesis therapy radiotherapy chemotherapy and other ICIs has improved the efficacy of ICI therapy to some extent in the clinic Although numerous studies related to ICI resistance were reported in GI cancers due to the strong spatial temporal heterogeneity and the complex immune microenvironment in different kinds of GI cancers and different individuals many questions about ICI resistance and reversal strategies remain unsolved The aim of this Research Topic is to provide a forum to exhibit the latest research achievement related to the exploration of biomarkers for immunotherapy resistance including HPD and the underlying molecular mechanisms as well as the development of reversal strategies in GI cancers We hope this Research Topic will lead to a better understanding of precision cancer immunotherapy and provide useful clues for clinical application to benefit more GI cancer patients with immunotherapy

Braicu,2023-06-05 Gastrointestinal cancers are among the most common cancer types based on the Cancer Genome Atlas GI cancers are within the most frequent malignancy with almost 150 000 new cases in 2020 On one hand a big number of researches are focused on the diagnosis new diagnostic approaches in upper and lower gastrointestinal tract cancers On the

other hand in the last 10 years several papers had been published about the possible therapeutic targets pointing to precision and personalized medicine

Phytochemicals Targeting Tumor Microenvironment in Gastrointestinal Cancers Ganji Purnachandra Nagaraju, 2020-10-07 Gastrointestinal GI malignancies account for a large portion of cancers worldwide Although incidence of esophageal gastric and colorectal cancers has decreased in recent years pancreatic and liver cancer have increased The mainstay of GI cancer therapy is chemoradiation and surgery Despite significant medical advancements diagnosis and therapy for GI cancers remain challenging due to tumor cell resistance to chemoradiotherapy The tumor s increased cell signalling due to excessive transcription factor activation and increased stellate cell activity leads to collagen deposition formation of a dense stroma around the tumor which prevents drugs from reaching the malignant cells This leads to tumor chemoresistance To circumvent these difficulties drug therapy targeting the tumor s specific microenvironment and the additive anticancer effect of phytochemicals can allow for more effective treatment This volume will be the first on the market on the topic of phytochemicals and their effect on the tumor microenvironment TME TME is an emerging area of research and the book will be a welcome introductory addition to the field
