Longair, Y. Kondo, 2012-12-06 ROSAT Observations G HASINGER Max Planck Institut für extraterrestrische Physik D 85740 Garching Germany Abstract This review describes the most recent advances in the study

of the extragalactic soft X ray background and what we can learn about its constituents The deepest pointed observations with the ROSAT PSPC are discussed The logN logS relation is presented which reaches to the faintest X ray fluxes and to the highest AGN surface densities ever achieved The N S relation shows a 2 density in excess of 400 deg at the faintest fluxes and a flattening below the Einstein Deep Survey limit About 60% of the extragalactic background has been resolved in the deepest field Detailed source spectra and first optical and radio identifications will be discussed The results are put into perspective of the higher energy X ray background Key words X rays background radiations active galactic nuclei 1

Introduction The extragalactic X ray background XRB discovered about 30 years ago has been studied extensively with many X ray experiments in particular with the satel lites HEAO I and II see ego Boldt 1987 and with ROSAT e g Hasinger et al 1993 Figure 1 shows a compilation of some of the most recent spectral measure ments for the X ray background Over the energy range from 3 to about 100 keY its spectrum can be well approximated by an optically thin thermal bremsstrahlung model with kT 40 keY while at lower X ray energies a steepening into a new component has been observed observed e g **The Invisible Universe** George B. G. K. Menon (Prof.), 1971 *Frontiers of Fundamental Physics* B. G. Sidharth, Furio Honsell, Alessandro De Angelis, 2007-09-18 The Sixth International Symposium Frontiers of Fundamental and Computational Physics Udine Italy 26 29 September 2004 aimed at providing a platform for a wide range of physicists to meet and share thoughts on the latest trends in various mainly cross disciplinary research areas This includes the exploration of frontier lines in High Energy Physics Theoretical Physics Gravitation and Cosmology Astrophysics Condensed Matter Physics Fluid Mechanics Such

frontier lines were unified by the use of computers as an often primary research instruments or dealing with issues related to information theory The book contains contributions by Nobel Laureates Leon N Cooper 1972 and Gerard t Hooft 1999 and concludes with two interesting chapters on new approaches to Physics Teaching Audience Graduate students lecturers and researches in Physics American Astronomy John Lankford,Ricky L. Slavings,1997-05-15 Focusing on a period that saw fundamental changes in the nature and content of astronomy including the rise of astrophysics Lankford has compiled remarkable data such as the number of people with and without doctorates the number who taught in colleges or universities versus those involved in industrial or government work and the number of women versus men He also addresses the crucial question of power within the community what it meant which astronomers had it and what they did with it **New Worlds, New Horizons in Astronomy and Astrophysics** National Research Council,Division on Engineering and Physical Sciences,Space Studies Board,Board on Physics and Astronomy,Committee for a Decadal Survey of Astronomy and Astrophysics,2011-01-04 Driven by discoveries and enabled by leaps in technology and imagination our understanding of the universe has changed dramatically during the course of the last few decades The fields of astronomy and astrophysics are making new connections to physics chemistry biology and computer science Based on a broad and comprehensive survey of scientific opportunities infrastructure and organization in a national and international context New Worlds New Horizons in Astronomy and Astrophysics outlines a plan for ground and space based astronomy and astrophysics for the decade of the 2010 s Realizing these scientific opportunities is contingent upon maintaining and strengthening the foundations of the research enterprise including technological development theory computation and data handling laboratory experiments and human resources New Worlds New Horizons in Astronomy and Astrophysics proposes enhancing innovative but moderate cost programs in space and on the ground that will enable the community to respond rapidly and flexibly to new scientific discoveries The book recommends beginning construction on survey telescopes in space and on the ground to investigate the nature of dark energy as well as the next generation of large ground based giant optical telescopes and a new class of space based gravitational observatory to observe the merging of distant black holes and precisely test theories of gravity New Worlds New Horizons in Astronomy and Astrophysics recommends a balanced and executable program that will support research surrounding the most profound questions about the cosmos The discoveries ahead will facilitate the search for habitable planets shed light on dark energy and dark matter and aid our understanding of the history of the universe and how the earliest stars and galaxies formed The book is a useful resource for agencies supporting the field of astronomy and astrophysics the Congressional committees with jurisdiction over those agencies the scientific community and the public
