Microbial Surfactants in Pharmaceuticals and Cosmetics R.Z.

Sayyed, Shilpa Mujumdar, 2025-02-28 Biosurfactants and bioemulsifiers are considered green molecules as they are produced from microbes and are easily degradable as compared to surfactants. They are suitable due to properties such as low toxicity, tolerance to a wide range pH level and temperature, high surface activity, biodegradability, excellent emulsifying and demulsifying ability. While caution and care should be exercised in its widespread usage, they are likely to replace chemical surfactants. The book focuses on biosurfactant production from various bacteria, diversity of biosurfactant-producing bacteria, and the industrial need of biosurfactants. Fields such as pharmacy, medicine, and cosmetics are covered. It is presented in an easy-to-understand manner and is well illustrated and comprises protocols and recent data on the production, formulation, and commercialization and other aspects of biosurfactants and bioemulsifiers. Fiber and Textile Engineering in Drug Delivery Systems

Navneet Sharma, Bhupendra Singh Butola, 2022-12-05 Fiber and Textile Engineering in Drug Delivery Systems explains how innovative textile processing methods including rotary spinning, microfluidics, wet spinning, and electrospinning can be used to produce novel drug delivery solutions. This topical book provides detailed descriptions of how to produce such new materials for this purpose with foundational content to help readers from a range of backgrounds understand the context of material selection and design decisions. Emphasis is given to the engineering side of the manufacturing of the textile and its role in drug delivery, but this also acts as a guide to pharmaceutical applications of textile fibers for materials scientists. Drug delivery research is rapidly expanding and experimenting with new materials to drive improved clinical outcomes as the efficacy of the therapeutic molecule is highly dependent on the right choice of carrier system. Recently, fiber-based carriers at both nano and micro scales are gaining interest in the scientific community due to ease of manufacturing, high surface area to volume ratio, desirable drug release kinetics, and high mechanical strength. Describes methods for material selection and design for drug delivery systems. Provides case studies to explain how these techniques can be applied successfully. Covers the regulatory and legal aspects of the use of the textiles and fibers in drug delivery. **Genetic**

Technology: A New Frontier Assessment Office Of Technology, 2020-09-23 First published in 1982. This report examines the application of classical and molecular genetic technologies to microorganisms, plants, and animals. This book is one of the first comprehensive documents on emerging genetic technologies and their implications for society. The authors discuss the opportunities and problems involved, describe current techniques, and attempt to project some of the economic, environmental, and institutional impacts of those techniques. The issues they raise go beyond those of technology utility and economic feasibility. As we gain the ability to manipulate life, we must face basic questions of just what life means and how far we can reasonably and safely allow ourselves to go. *Advancements in Pharmacology: Integrating Molecular Mechanisms, Therapeutics, and Drug Development*
