Frontiers in Crustacean Neurobiology K. Wiese, 2013-11-21 Donald Kennedy President Stanjord University Alnwst exactly a dozen years elapsed between the time I set aside I thought temporarily J my own interest in crustacean nervous systems and the arrival of an invitation from Konrad Wiese to participate in this symposium The intervening years have plainly been productive ones for the field indeed I can only hope that there is no causal connection between its prosperity and my absence Discontinuous contact with an intellectual venture whatever disappointments it may present does offer one virtue it provides a nwre dramatic alnwst stroboscopic view of progress To the lapsed practitioner the rate of advance in crustacean neurobiology over the decade seems remarkable equally remarkable is the number of able young researchers many of them the scientific progeny of my colleagues from the sixties and seventies How to summarize the changes they have wrought Those of us who began working with crustacean nervous systems thirty years 090 or so were attracted by several features First of alt there was a limited nwtor system with readily identifiable neurons It was dijft cult to look at those old methylene blue stains of Retzius and not want to do an experiment immediately Kees Wiersma ojten did and it was he who nwst persuasively called our attention to the advantages oifered by neuronal parsinwny in combination with stereotyped motor output patterning Ted Bullock exploited these features in his elegant early experiments on cardiac ganglia Annual Review Marine Laboratory (Aberdeen, Scotland), 1990

German books in print, 1990 **International Books in Print**, 1990 *Das Schweizer Buch*, 1990 *The Crustacean Nervous System* Konrad Wiese, 2002 This unique selection of reviews summarizes current knowledge in all major fields of crustacean neurobiology and all levels of their CNS organization using lobster and crayfish It not only imparts theoretical knowledge but also describes all available contemporary and advanced techniques such as patch clamp recordings microelectrode techniques immunocytochemistry and all methods of molecular genetics to identify cellular pathways of protein synthesis and peptidergic control In summary it is a comprehensive account of the research achievements in one of the major nervous systems besides the mammalian CNS Chemical Communication in Crustaceans Thomas Breithaupt, Martin Thiel, 2010-11-25 The crustaceans are ecologically and economically important organisms They constitute one of the dominant invertebrate groups on earth particularly within the aquatic realm Crustaceans include some of the preferred scientific model organism profitable aquaculture specimen but also invasive nuisance species threatening native animal communities throughout the world Chemoreception is the most important sensory modality of crustaceans acquiring important information about their environment and picking up the chemical signals that mediate communication with conspecifics Significant advances have been made in our understanding of crustacean chemical communication during the past decade This includes knowledge about the identity production transfer reception and behavioral function of chemical

signals in selected crustacean groups While it is well known that chemical communication is an integral part of the behavioral ecology of most living organisms the intricate ways in which organisms allocate chemicals in communication remains enigmatic How does the environment influence the evolution of chemical communication What are the environmental cues that induce production or release of chemicals How do individuals economize production and utilization of chemicals What is the importance of molecule specificity or mix of a molecule cocktail in chemical communication What is the role of chemical cues in multimodal communication How does the ontogenetic stage the sex or the physiological status of an individual affect its reaction to chemical cues Many of these questions still represent important challenges to biologists

The Crustacean Stomatogastric System Allen I. Selverston, Maurice Moulins, 1987 This book is a result of a Symposium organized by the Editors in October 1984 at San Diego Almost all of the present and past investigators of the Crustacean Stomatogastric Nervous Systems participated However this book should not by any means be considered a symposium report Its goal is to present not only the most recent results obtained with this system but also a complete and comprehensive view of the contributions made by this preparation to fundamental concepts in neurobiology This has been possible only with the cooperation of all of the investigators concerned and we must gratefully thank all of our colleagues who have agreed to let the authors of the chapters include some unpublished results Short appendices have been added to several chapters to clarify some key points which are still unpublished or to illustrate briefly some recent promising new findings We would also like to acknowledge as a whole the many journals which have permitted us to reproduce some Original figures Maurice Moulins and Allen I Selverston Supported by the National Science Foundation and the Centre National de la Recherche Scientifique Contents Introduction M Moulins and A I Selverston With 4 Figures 1 1 Functional Anatomy and Behavior B J Claiborne and J Ayers With 11 Figures 9 1 1 Functional Anatomy 9 1 1 1 Ossicles 9 1 1 2 Musculature 11 1 1 3 Nervous System 13
