Engineering Monographs ,1990 **Hydraulic Processes on Alluvial Fans** R.H. French,1987-06-01 Alluvial fans are

among the most prominent landscape features in the American Southwest and throughout the semi arid and arid regions of the world The importance of developing a qualitative and quantitative understanding of the hydraulic processes which formed and which continue to modify these features derives from their rapid and significant development over the past four decades As unplanned urban sprawl has moved from valley floors onto alluvial fans the serious damage incurred from infrequent flow events has dramatically increased This book presents a concise coherent discussion of our current and rapidly expanding knowledge of hydraulic processes on alluvial fans It addresses the subject from a multidisciplinary viewpoint acquainting the geologist with engineering principles and the civil engineer and planner with geological principles pertinent to the analysis of hydraulic processes on alluvial fans The book thus provides much of interest to geologists civil engineers and planners involved in floodplain management and drainage design in arid and semi arid regions

Engineering Reliability and Risk in Water Resources L. Duckstein, Erich J. Plate, 2012-12-06 Hydraulic hydrologic and water resources engineers have been concerned for a long time about failure phenomena One of the major concerns is the definition of a failure event E of its probability of occurrence PtE and of the complementary notion of reliability However as the stochastic aspects of hydraulics and water resources engineering were developed words such as failure reliability and risk took on different meanings for different specialists For example risk is defined in a Bayesian framework as the expected loss resulting from a precisely defined failure event while according to the practice of stochastic hydraulics it is the probability of occurrence of a failure event The need to standardize the various concepts and operational definitions generated numerous exciting discussions between the co editors of this book during 1983-84 when L Duckstein under sponsorship of the Alexander von Humboldt Foundation FRG was working with E Plate at the Institute of Hydrology and Water Resources of the University of Karlsruhe After consulting with the Scientific Affairs Division of NATO an organizing committee was formed This committee J Bernier France M Benedini Italy S Sorooshian U S A and co directors L Duckstein U S A and E J Plate F R G brought into being this NATO Advanced Study Institute ASI Precisely stated the purpose of this ASI was to present a tutorial overview of existing work in the broad area of reliability while also pointing out topics for further development

Role of Dams and Reservoirs in a Successful Energy Transition Robert Boes, Patrice Droz, Raphaël Leroy, 2023-08-31 Today new and unexpected challenges arise for Europe's large array of existing dams and fresh perspectives on the development of new projects for supporting Europe's energy transition have emerged In this context the 12th ICOLD European Club Symposium has been held in September 2023 in Interlaken Switzerland The overarching Symposium theme was on the Role of dams and reservoirs in a successful energy transition The articles collected in this report book consisting of a 250 page abstract book and a 1010 page full paper USB cover the various themes developed during the symposium Dams and reservoirs for hydropower Dams and reservoirs for climate change adaptation Impact mitigation of dams and reservoirs How to deal with ageing dams In conjunction with the Symposium the 75th anniversary of

the Swiss Committee on Dams offered an excellent opportunity to not only draw from the retrospective of Switzerland's extensive history of dam development but to also reveal perspectives on the new role of dams for a reliable and affordable energy transition. These aspects are illustrated by several articles covering the various activities, challenges, and concerns of the dam community.

Use of a Two-dimensional Flow Model to Quantify Aquatic Habitat D. Michael Gee, Daniel B. Wilcox, 1985. This paper describes the impacts of potential hydropower retrofits on downstream flow distributions at Lock and Dam No 8 on the upper Mississippi River. The model used solves the complete Reynolds equations for two-dimensional free surface flow in the horizontal plane using a finite element solution scheme. RMA 2 has been in continuing use and development at the Hydrologic Engineering Center and elsewhere for the past decade. Although designed primarily for the simulation of hydraulic conditions, RMA 2 may be used in conjunction with related numerical models to simulate sediment transport and water quality. In this study, velocity distributions were evaluated with regard to environmental, navigational, and small boat safety considerations. Aquatic habitat was defined by depth, substrate type, and current velocity. Habitat types were quantified by measuring the areas between calculated contours of velocity magnitude isotachs for existing and project conditions. The capability for computing and displaying isotachs for the depth-average velocity, one foot from the bottom and near the water surface, was developed for this study. The product of this study effort is an application of the RMA 2 model that allows prediction of structural aquatic habitat in hydraulically complex locations. Elements of the instream flow group methodology could be incorporated to provide detailed predictions of impacts to habitat quality. Calibration of the numerical model to field measurements of velocity magnitude and direction is also described.
