Nature Alive Adam Scarfe, 2018-04-18 This volume pays homage to Alfred North Whitehead s 1861 1947 profound lecture and essay entitled Nature Alive which was one of his most mature expressions of his process relational metaphysics a holistic conceptual framework that renders vivid the dynamic character of the natural world and the intrinsic purposiveness selective agency and creativity of living organisms Inspired by but not beholden to Whitehead s process metaphysical lens the contributors to this volume bring a multiplicity of philosophical orientations to the table in

challenging the mechanistic and reductionistic neo Darwinian paradigm that is still dominant today in the life sciences Mechanistic neo Darwinism views nature and living organisms as machines namely as networks of externally related and linear causal switches dials levers pulleys and gears that are at the ready for technological and biotechnological manipulation Seeking a conceptual framework and a language that are more adequate to the study of the natural world and of living creatures than the mechanistic orientation the contributors to this volume explore several of the New Frontiers of Biology which are areas of biology whose findings to some extent go beyond the explanatory confines of the Modern Synthesis of natural selection and genetics Most notably emergence theory the theory of organic selection epigenetics homeostasis chronobiology and autopoiesis research can provide us with key insights that can assist us in explaining how living agents emerged including the evolutionary origins of mentality consciousness and mind Moreover attention to the New Frontiers of Biology can serve to re enchant our understanding of the natural world and to prevent ecological devastation through a restoration to objectivity of notions such as intrinsic purposiveness selective agency creativity and intrinsic value
