not only the theoretical issues such as the concept of works and the bibliographic relationships of musical works but also provides a unique survey of most of the systems that actually implement FRBR such as the AustLit Gateway This book describes the challenges that accompany implementation of FRBR and how this abstract approach to cataloging can be a useful practical tool to help improve library systems Functional Requirements for Bibliographic Records FRBR Hype or Cure All clearly explains the concepts ideas and practical applications of FRBR The book is comprised of four major sections A chronological section explains how FRBR was developed and how it will evolve in the future a theoretical section reviews how FRBR analyzes different types of library materials a practical aspects section examines how some systems actually use FRBR and lastly a section that explains an alternative to FRBR the XOBIS project which shows that other solutions are possible to meet future cataloging challenges Functional Requirements for Bibliographic Records FRBR explores innovative features including the Semantic Web activities future evolutions in cataloging alternatives to FRBR the history of IFLA Functional Requirements for Bibliographic Records Study an updated description of the entity relationship model being developed by the Working Group to extend the FRBR model to cover authority data key aspects of the FRBR and FRANAR models that will need to be re examined the concept of expression the cataloging of hand press materials the AustLit Gateway musical works in the FRBR model the Paradigma Project at the National Library of Norway the FRBR and the performing arts oral traditions and FRBR the design of future systems the European FRBR research initiative FRBRizing OCLC s WorldCat the IFPA software and application interfaces the Library of Congress s FRBR Display Tool XOBIS metadata the critical bridge between content and sophisticated access Librarians library science faculty students and vendors will find Functional Requirements for Bibliographic Records FRBR Hype or Cure All an invaluable source of information on both the theoretical and practical aspects of FRBR

**The FRBR Family of Conceptual Models** Richard P. Smiraglia, Pat Riva, Maja Žumer, 2014-10-29 Since 1998 when FRBR Functional Requirements for Bibliographic Records was first published by IFLA the effort to develop and apply FRBR has been extended in many innovative and experimental directions Papers in this volume explain and expand upon the extended family of FRBR models including Functional Requirements for Authority Data FRAD Functional Requirements for Subject Authority Data FRSAD and the object oriented version of FRBR known as FRBRoo Readers will learn about dialogues between the FRBR Family and other modeling technologies specific implementations and extensions of FRBR in retrieval systems catalog codes employing FRBR a wide variety of research that uses the FRBR model and approaches to using FRBR for the Semantic Web Librarians of all stripes as well as library and information science students and researchers can use this volume to bring their knowledge of the FRBR model and its implementation up to date This book was published as a special issue of Cataloging Classification Quarterly FRBR, Before and After Karen Coyle, 2015-11-14 Coyle s expert ability to draw from the deep historical background of cataloging theory to illuminate the potentials of library data on the Web helped win her the 2011 ALCTS Outstanding Publication Award Here she persuasively

argues that to more effectively connect library users with books movies music computer games and other resources library data needs to move beyond FRBR towards a more integrative approach to bibliographic models But doing so requires fundamental changes in the approach to library data Combing a sweeping perspective with a critical eye she assesses how we define a work in the bibliographic world Showing how bibliographic models reflect technology and our assumed goals of libraries she points the way ahead for catalogers and metadata specialists providing clear explanations and analysis on such topics as library data models and their connection to technology from early printing to relational databases and the Semantic Web ideas and influence of leading thinkers such Lubetsky Wilson and Tillet along with lesser known theorists like Tanaguchi IFLA meetings that led to the FRBR study group including its original charge and final report FRBR as a conceptual model and how that differs from data models the FRBR document s flawed entity relationship model and how it overlooks user needs efforts to define a work as a meaningful creative unit separate from the physical package detailed analysis of the FRBR entities and implementations of FRBR both inside and outside the library community Coyle s articulate treatment of the issues at hand helps bridge the divide between traditional cataloging practice and the algorithmic metadata approach making this book an important resource for both LIS students and practitioners Directions in Music Cataloging Peter H.

Lisius, Richard Griscom, 2012-01-01 In Directions in Music Cataloging ten of the field s top theoreticians and practitioners address the issues that are affecting the discovery and use of music in libraries today Anyone who uses music in a library be it a teacher researcher student or casual amateur relies on the work of music catalogers and because these catalogers work with printed and recorded materials in a wide variety of formats they have driven many innovations in providing access to library materials As technology continues to transform the discovery and use of music they are exploring ways to describe and provide access to music resources in a digital age It is a time of flux in the field of music cataloging and never has so much change come so quickly The roots of today s issues lie in the past and the first part of the volume opens with two articles by Richard P Smiraglia that establish the context of modern music cataloging through research conducted in the early 1980s The second part explores cataloging theory in its current state of transition and the concluding part looks to the future by considering the application of emerging standards The volume closes with a remembrance of A Ralph Papakhian 1948 2010 the most prominent music cataloger of the past thirty years a figure who initiated many of the developments covered in the volume and who served as a teacher and mentor for all of the contributors Digital Libraries: Universal and Ubiquitous Access to Information George Buchanan, Masood Masoodian, Sally Jo Cunningham, 2008-11-13 This book constitutes the refereed proceedings of the 11th International Conference on Asian Digital Libraries ICADL 2008 held in Bali Indonesia in December 2008 The 30 revised full papers 20 revised short papers and extended abstracts of 13 poster papers carefully reviewed and selected from numerous submissions The paper topics cover the spectrum of digital libraries including multimedia digital libraries usability and evaluation information retrieval ontologies social tagging metadata issues

multi and cross language retrieval digital preservation and scholarly publishing and communities      Versioning Cultural Objects Roman Bleier, Winslow Sean M., 2020-01-02 This volume approaches an understanding of the term versioning in the broadest sense discussing ideas about how versions differ across forms of media including text image and sound Versions of cultural objects are identified defined articulated and analysed through diverse mechanisms in different fields of research The study of versions allows for the investigation of the creative processes behind the conception of works a closer inspection of their socio political contexts and promotes investigation of their provenance and circulation Chapters in this volume include discussion of what a version means in different fields case studies implementing digital versioning techniques conceptual models for representing versions digitally and computational and management issues for digital projects
