**Plant Diversity and Ecology in the Chihuahuan Desert** Maria C. Mandujano, Irene Pisanty, Luis E. Eguiarte, 2020-07-18 Environmental and specific diversity in the Chihuahuan desert in general and in the Cuatro Ci negas Basin in particular has long been recognized as outstanding This book provides a global ecological overview together with in depth studies of specific processes The Chihuahuan desert is the warmest in North America and has a complex geologic climatic and biogeographical history which affects today s distribution of vegetation and plants and generates complex phylogeographic patterns The high number of endemic species reflects this complex set of traits The modern distribution of environments including aquatic and subaquatic systems riparian environments gypsum dunes and gypsum rich soils low levels of phosphorous and organic matter and high salinity combined with an extreme

climate call for a range of adaptations Plants are distributed in a patchy pattern based on punctual variations and many of them respond to different resources and conditions with considerable morphological plasticity In terms of physiological morphological and ecological variability cacti were identified as the most important group in specific environments like bajadas characterized by high diversity values while gypsophytes and gypsovagues of different phylogenies including species with restricted distribution and endemics

Duffy,2021-08-10 A comprehensive introduction to ocean ecology and a new way of thinking about ocean life Marine ecology is more interdisciplinary broader in scope and more intimately linked to human activities than ever before Ocean Ecology provides advanced undergraduates graduate students and practitioners with an integrated approach to marine ecology that reflects these new scientific realities and prepares students for the challenges of studying and managing the ocean as a complex adaptive system This authoritative and accessible textbook advances a framework based on interactions among four major features of marine ecosystems geomorphology the abiotic environment biodiversity and biogeochemistry and shows how life is a driver of environmental conditions and dynamics Ocean Ecology explains the ecological processes that link organismal to ecosystem scales and that shape the major types of ocean ecosystems historically and in today s Anthropocene world Provides an integrated new approach to understanding and managing the ocean Shows how biological diversity is the heart of functioning ecosystems Spans genes to earth systems surface to seafloor and estuary to ocean gyre Links species composition trait distribution and other ecological structures to the functioning of ecosystems Explains how fishing fossil fuel combustion industrial fertilizer use and other human impacts are transforming the Anthropocene ocean An essential textbook for students and an invaluable resource for practitioners

**Sustainable Plant Nutrition** Tariq Aftab,Khalid Rehman Hakeem,2022-10-20 Sustainable Plant Nutrition Molecular Interventions and Advancements for Crop Improvement explores the significant opportunities for sustainable eco friendly approaches in plant nutrition and agricultural crop production The book highlights the various prospects involved in optimizing plant nutrient uptake agriculture and includes chapters representing diverse areas dealing with biotechnology nanotechnology molecular biology proteomics genomics and metabolomics This book is an ideal resource for those seeking to ensure a sustainable plant production future While plants have evolved a set of elaborate mechanisms to cope with nutrient limitations the traditional supplementation by the

application of fertilizers to plant productivity may then lead to overfertilization which can actually reduce plant growth and have adverse effects on the environment To tackle these issues a detailed understanding of the responses of plants to nutrients and nutrient deficiency at the physiological metabolic transcriptome and epigenetic level is essential Illustrates the central role of sustainable plant nutrition to address current and future challenges Presents global insights and research ranging from signaling to sensing and translational research Provides a forward looking perspective for future plans of action

Caduto,Joseph Bruchac,1998 This interdisciplinary curriculum in botany and plant ecology focuses on environmental and stewardship issues using the framework of Native American stories as an introduction to the topics A Theory of Global Biodiversity Boris Worm,Derek P. Tittensor,2018-06-12 The number of species found at a given point on the planet varies by orders of magnitude yet large scale gradients in biodiversity appear to follow some very general patterns Little mechanistic theory has been formulated to explain the emergence of observed gradients of biodiversity both on land and in the oceans Based on a comprehensive empirical synthesis of global patterns of species diversity and their drivers A Theory of Global Biodiversity develops and applies a new theory that can predict such patterns from few underlying processes The authors show that global patterns of biodiversity fall into four consistent categories according to where species live on land or in coastal pelagic and deep ocean habitats The fact that most species groups from bacteria to whales appear to follow similar biogeographic patterns of richness within these habitats points toward some underlying structuring principles Based on empirical analyses of environmental correlates across these habitats the authors combine aspects of neutral metabolic and niche theory into one unifying framework Applying it to model terrestrial and marine realms the authors demonstrate that a relatively simple theory that incorporates temperature and community size as driving variables is able to explain divergent patterns of species richness at a global scale Integrating ecological and evolutionary perspectives A Theory of Global Biodiversity yields surprising insights into the fundamental mechanisms that shape the distribution of life on our planet

**Oceanography** Tom Garrison,1993 Written for an introduction to oceanography course this book covers the geological

physical biological and ecological aspects

**Degradation, Ecological Restoration and Adaptive Management of Estuarine Wetlands under Intensifying Global Changes, volume II** Tian Xie, Milko Alberto Jorquera, Laibin Huang

Junhong Bai, 2024-07-03 Estuarine wetlands play important roles in providing various ecosystem services such as providing habitat for living organisms preventing seawater intrusion conserving biodiversity regulating microclimate and promoting nutrient cycling and carbon sequestration Estuaries are home to many mega cities such as New York San Francisco Shanghai and Tokyo accompanied by frequent human activities These human induced disturbances have rapidly altered the structure and function of estuarine ecosystems through land reclamation pollution overfishing and altered flows Moreover estuarine wetlands have been greatly threatened by intensifying global climate changes particularly more frequent tsunamis sea level rise and large scale biological invasions which will not only affect primary and secondary productivity community composition and distribution and biodiversity but also natural ecohydrological and biogeochemical processes and will ultimately disrupt ecosystem services To mitigate such negative impacts a growing number of estuarine wetland restoration projects have been undertaken in recent years These projects aim to re establish a variety of ecological attributes including community structure species diversity and habitat and ecological processes energy flow and nutrient cycling which implies increased resilience and resistance of estuarine ecosystems to abiotic and biotic stressors However ecological restoration practices are not always satisfactory in the face of uncertainties from intensifying global changes and socioeconomic variation Ecologists biologists environmentalists have been working on finding more effective solutions to restore degraded estuarine wetland ecosystems on a global scale The concepts of nature based solutions adaptive management or ecological networks seem to offer better prospects and are now being used to reframe estuarine restoration on critical uncertainties reduction climate change adaptation and mitigation strategies As the world enters the United Nations Decade of Ecosystem Restoration 2021 2030 countries and organizations around the world will pay greater attention to the innovation of ecological restoration underpinnings to ensure that estuarine restoration achieves its full potential in delivering social and ecological coordination and ultimately sustainable development Therefore it is important to discuss how anthropogenic disturbances and climate change affect estuarine wetlands and how the latest restoration framework can guide future practices towards conserving and restoring the biodiversity of estuarine wetlands

Organism and Environment Sonia E. Sultan, 2015-09-10

Over the past decade advances in both molecular developmental biology and evolutionary ecology have made possible a new understanding of organisms as dynamic systems interacting with their environments This innovative book synthesizes a wealth of recent research findings to examine how environments influence phenotypic expression in individual organisms ecological development or eco devo and how organisms in turn alter their environments niche construction A key argument explored throughout the book is that ecological interactions as well as natural selection are shaped by these dual organism environment effects This synthesis is particularly timely as biologists seek a unified contemporary framework in which to

investigate the developmental outcomes ecological success and evolutionary prospects of organisms in rapidly changing environments Organism and Environment is an advanced text suitable for graduate level students taking seminar courses in ecology evolution and developmental biology as well as academics and researchers in these fields      **Atmospheric Perspectives** Vlado Spiridonov,      **The Green Marble** David Turner, 2018-05-15 Humans have difficulty thinking at the global scale Yet as we come to understand our planet as a single interconnected complex system and encounter compelling evidence of human impact on Earth s climate and biosphere the need for a truly global effort is increasingly urgent In this concise and accessible text David P Turner presents an overview of global environmental change and a synthesis of research and ideas from the rapidly evolving fields of earth system science and sustainability science that is suitable for anyone interested in humanity s current predicaments and what we can do about them The Green Marble examines Earth s past contemporary human disruption and the prospects for global environmental governance Turner emphasizes the functioning of the biosphere the totality of life on Earth including its influence on geologic history its sensitivity to human impacts and its possible role in ameliorating climate change Relying on models of the earth system that synthesize vast amounts of monitoring information and recent research on biophysical processes The Green Marble describes a range of scenarios for our planetary home exploring the effects of anthropogenic greenhouse gas emissions and factors such as economic globalization Turner juxtaposes cutting edge ideas from both the geosciences and the social sciences to illustrate how humanity has arrived upon its current dangerous trajectory and how we might pull back from the brink of civilization challenging environmental change Growing out of the author s popular course on global environmental change The Green Marble is accessible to non science majors and provides a framework for understanding the complex relationship of humanity to the global environment
