Boundary Value Problems for Engineers Ali Ümit Keskin, 2019-06-19 This book is designed to supplement standard texts and teaching material in the areas of differential equations in engineering such as in Electrical Mechanical and Biomedical engineering Emphasis is placed on the Boundary Value Problems that are often met in these fields This keeps the the spectrum of the book rather focussed The book has basically emerged from the need in the authors lectures on Advanced Numerical Methods in Biomedical Engineering at Yeditepe University and it is aimed to assist the students in solving general and application specific problems in Science and Engineering at upper undergraduate and graduate level Majority of the problems given in this book are self contained and have varying levels of difficulty to encourage the student Problems that deal with MATLAB simulations are particularly intended to guide the student to understand the nature and demystify theoretical aspects of these problems Relevant references are included at the end of each chapter Here one will also find large number of software that supplements this book in the form of MATLAB script m files The name of the files used for the solution of a problem are indicated at the end of each corresponding problem statement There are also some exercises left to students as homework assignments in the book An outstanding feature of the book is the large number and variety of the solved problems that are included in it Some of these problems can be found relatively simple while others are more challenging and used for research projects All solutions to the problems and script files included in the book have been tested using recent MATLAB software The features and the content of this book will be most useful to the students studying in Engineering fields at different levels of their education upper undergraduate graduate

American Book Publishing Record , 1999 **Modeling with Differential Equations in Chemical Engineering** Stanley M. Walas, 1991 Modelling with Differential Equations in Chemical Engineering covers the modelling of rate processes of engineering in terms of differential equations While it

includes the purely mathematical aspects of the solution of differential equations the main emphasis is on the derivation and solution of major equations of engineering and applied science Methods of solving differential equations by analytical and numerical means are presented in detail with many solved examples and problems for solution by the reader Emphasis is placed on numerical and computer methods of solution A key chapter in the book is devoted to the principles of mathematical modelling These principles are applied to the equations in important engineering areas The major disciplines covered are thermodynamics diffusion and mass transfer heat transfer fluid dynamics chemical reactions and automatic control These topics are of particular value to chemical engineers but also are of interest to mechanical civil and environmental engineers as well as applied scientists The material is also suitable for undergraduate and beginning graduate students as well as for review by practising engineers
